Thread: [SanZ Loader | C++/ASM | ADVANCED REMOTE SYSTEM | WATCHDOG | WIDE SUPPORT | AND MORE..](#)

RCE - December 30, 2018, 1:44 pm

What is SanZ loader?

SanX loader is a great tool coded to achieve the maximum stability and persistence in the client's systems.

Sanz Loader Features:-Coded with C++/ASM

- Don't need .NET Framework dependencies.
- Support all Windows versions (Win-XP x32 x64 -> win 10 x32 x64).
- Encrypted C&C (RC4).
- Download and execute.
- Anti emulation,debug,sandbox,...etc.
- Watchdog.
- Hidden Startup.
- Bots GEO info.
- Bot Shop integrated.
- Random UserAgent on the connection.
- Dynamic Connection Period(Avoid Runtime Detection).
- DB management system.
- Panel multi-user system.
- Able to hold thousands of bots at the same time.
- Low resource usage.
- Uninstall.
- Restart System.
- Shutdown system.

-Free updates.

-Come with Dropper (High execution rate).

Dropper Features:

[*]-Coded with FASM.

[*]-Support all Windows versions (Win-XP x32 x64 -> win 10 x32 x64).

[*]-Don't need .NET Framework dependencies.

[*]-Lite size (~2kb).

[*]-Melt(Anti-Tracing)

[*]-High Execution Rate.

Screenshots:

Spoiler [\(Click to View\)](#)

BotShop order example:

Price:

299.99\$

Note: This is a discounted price and it will increase soon.

Contact:

-PM

-Jabber: jikum@xmpp.jp

TOS:

-All sales are final.

-You are responsible for all your actions.

-No leak/share the software/panel.

-This is a sale thread, all technical questions can be answered via Jabber/pm.

-TOS can be updated anytime.

Vouchs:

(Jan 5, 2019 05:31 AM)DraganovTeda Wrote: [\[CITE\]](#) Just bought SanZ Loader..Very good stability

and the seller knows his stuff as well !

Vouch for Shad0Byte !!!

[Contract](#)

Code ChangeLog:

v1.2

-Watchdog and persistence have been improved.

-Added Update link in the Botshop.

-Added Start/Stop actions in the Botshop.

v1.1

-Initial release.

Qcode - December 30, 2018, 7:46 pm

This looks great, will be buying. What are the run-time results right now? (I know i'll have to crypt anyway just curious)

NYANxCAT - December 30, 2018, 8:15 pm

Very nice panel, good luck bro.

constptr - December 30, 2018, 8:31 pm

Nice panel, is the gui part also done in FASM?

What hooking method have you used?

PerfectStorm - December 30, 2018, 8:34 pm

No vouch copies give for this software?

El Lobo - December 31, 2018, 12:03 am

What does mean "Encrypted C&C (RC4)"?

Do you inject watchdog threads into already running processes? What does it mean aggressive persistence?

How do you achieve hidden startup? By using run once reg key?

How do you bypass hips? Do you use hook evasion, if yes how? Does your bot use injection or it uses its own process?

Please answer these.

@El Lobo has a valid point, care to answer any questions on your thread? it does look shady that you're not willing to answer here and prefer somewhere privateKardon don't have encrypted C&C,inline asm,dropper,watchdog...more ?

The point that the technical issues shouldn't be discussed here because this is a sale thread and El Lobo is not a potential customer to answer his questions btw his questions:

What does mean "Encrypted C&C (RC4)"?

-It means the communication between client and server is encrypted by RC4 algorithm which it generates PRNG.

Do you inject watchdog threads into already running processes? What does it mean aggressive persistence?

-Watchdog will monitor the changing of files/registry keys plus it injects itself into a process to achieve the goal, aggressive persistence means it monitor any changing/modification of its component to perform an instant action (Integrity checker)

How do you achieve hidden startup? By using run once reg key?

-The files and folders that used for startup are hidden , i didn't implement a ring3 rootkit beside the most hooking techniques are detectable by HIPS.

How do you bypass hips? Do you use hook evasion, if yes how? Does your bot use injection or it uses its own process?

-I'vent tested the RT detection, but the most functions are coded to evade some of AV's runtime detection like using random user agents, dynamic connection period, and others will not discuss here.

El Lobo - December 31, 2018, 8:27 am

(Dec 31, 2018 08:18 AM)Shad0Byte Wrote: [CITE](#) Kardon don't have encrypted C&C,inline asm,dropper,watchdog...more ?

I dont want to sound like an asshole but your answers are pretty shit and doesnt explain anything. Whats the use of PRNG? I dont get it? Does RC4 generates PRNG? Do you even know what does PRNG stands for?

How do you inject? What windows apis are you using to perform injection? Do you create a new thread in the process you inject to? How do you write your malware to the proces, using WPM?

How are the files and folder hidden? By using windows default options to hide files and folders? Can they be seen when you enable show hidden files and folders in windows explorer? You say rootkit is detected by all avs but why do you thing that process injection isnt?

Dynamic connection period and random useragent wont do anything in regard to antivirus runtime detection.

shekel thief - December 31, 2018, 8:37 am

looking good, keep the thread up to date.

RCE - December 31, 2018, 8:42 am

@El Lobo, nothing of my business is 'how' you ask and i reply with a short answer, you will not get what u want so don't try.

I'm not an english user so i couldnt explain i well and i wrote the reply quick without in-depth explanation.

@Zettabit, GTFO with ur .net shit kid.

exploit.exe - December 31, 2018, 8:44 am

This is interesting, do you have videos of it?

3DES - December 31, 2018, 8:44 am

Provide a bin for reversing if you want to get rid of false claims and clean your reputation atleast.

RCE - December 31, 2018, 8:45 am

(Dec 31, 2018 09:44 AM)C O D E Wrote: [\[CITE\]](#) This is interesting, do you have videos of it? I'll post a video soon.

You seem like a multi, good luck find someone else.

Twistd - December 31, 2018, 9:19 am

You know I find it funny how people are hammering pasting. There's nothing wrong with pasting code as long as you know exactly what that code is doing :) i paste old code I've written every day as I cba to rewrite it every time I need it. There's no reason to reinvent the wheel. However if you don't know what the code does and simply pasting, that's when it becomes a problem :)

Also for the record I wouldn't share a sample to reversing just because some people in my thread demanded it either. He could however improve his thread my adding a bit more technical information ?

RCE - December 31, 2018, 9:33 am

I have never said anything about copy-pasting. You probably haven't referred to me but I had to write it just in case you were. I just asked him simple questions about his malware. I do not ask for a sample nor anything and from his posts I can clearly see that he has very low knowledge about it. Sure, he managed to send some basic http request and all the basic stuff that goes with it that makes low end malware.

RCE - December 31, 2018, 10:30 am

@El Lobo , Who the fuck do you think you are to evaluate other people's knowledge ? I think you forget your place kid go back to the cave that you come from however, you will not get what you want.
if you think this is a basic botnet then GTFO and find another thread to trash it.

Twistd - December 31, 2018, 10:39 am

I can only evaluate something that I can read or see. From what I have seen from you I have drawn that conclusion. You are free to correct me and I am always eager to be proven wrong when someone has real arguments. Insults are not gonna cut it and they just prove that when you know you are wrong you begin to insult people without reason. This is public place and everyone is entitled to have his own opinion. If we were just to ask questions as per your guide that you have written then this whole concept would have no sense.

(Dec 31, 2018 11:39 AM)Twistd Wrote: [\[CITE\]](#) Oh it wasn't directed towards you. I just saw multiple people mentioning copy paste and wanted to mention that copy paste doesn't necessarily mean something bad :)

My thoughts exactly, it's fine but when making malware they should have some more creativity.

Also, happy new year to you and everyone else, even to you OP.

Yattaze - December 31, 2018, 11:18 am

Hey! This looks oddly familiar, integrated botshop you say?

(Dec 31, 2018 12:18 PM)Yattaze Wrote: [\[CITE\]](#) Hey! This looks oddly familiar, integrated botshop you say?

Seriously though the panel is nearly a straight rip from Kardon, take the time to learn how to make your own.

For anyone wondering, there is an update to Kardon planned, plugins and the general shittiness fixed

Zettabit - December 31, 2018, 6:18 pm

Literally who gives a shit if a panel is stolen? There is nothing important about the panel at all, it can be pasted and stolen for all the customers care and it would still not impact the utility of the product.

The actual payload is what matters.

This is not to say that SanZ is good, of course, because from what OP said it is pretty clear that he has no background in malware developments. But attacking people for copying a panel is petty and stupid.

disrespectful to dumb and time wasters yes because we as members must clean this garbage from HF.

dude, u can rag much better than this, why u afraid to share simple pe32 stub of urs i don't have ur panel, so sending me ur pe32 file simply just like sending ur exe to victim, as u said its not so Kardon , if you say so send me ur pe32 file prove am wrong after i analyzing ur stub

Hexona - January 2, 2019, 7:23 am

Vouch, good design and good bot, GLWS!

You know pe32 is just something I name bins si it doesn't get misclicked. You're free to call it exe or executable. No one's gonna misclick your text.

Yes , i'll send u an instruction for setup this loader.

Yattaze - January 6, 2019, 2:26 pm

800kb for a loader, did you even remove the debug symbols

thork13 - January 8, 2019, 8:33 am

hello somebody that aiga used this boot and tell me if it's really buan I'm interested in buying it only comments from people who love it used please

DraganovTeda - January 8, 2019, 10:31 am

I've bought SanZ Loader and it worked smoothly the stability was good and better than other botnets i've tried,
download and execute function was very good rate when i download other programs on the victims

RCE - January 9, 2019, 10:50 am

Update:

-More improves has been released.

RCE - January 15, 2019, 6:36 am

A huge update will release soon,
-SanZ loader Private version -->85 % completed.

Jerry Smith - January 15, 2019, 11:12 pm

You can't understand the quality of this product until you've seen it in action. GLWS man!

RCE - January 17, 2019, 7:54 am

yes its available for sale.

HYDRA 2FA - March 10, 2019, 3:01 am

I bought it yesterday,waiting for files

RCE - March 10, 2019, 2:06 pm

@barracude, already sent u the files again ,check ur jabber.

Regards ?

HYDRA 2FA - March 11, 2019, 6:49 am

I purchased the loader without receiving a single installation instruction.

The panel itself is unfinished, it is impossible to create tasks because of a lack of cmd.php

Huge file detection, I'm not talking about runtime detect

The panel is most likely a remake of Kardon Loader(mention in the panel and in the files)

I do not advise buying until the working panel is in place, and the stub is cleaned

Maximum price of the current product - \$50
