Thread: [let's talk about the "no loss glitch" on PS4/X1](#)

soulwax1 - January 4, 2019, 8:20 am

Hello everybody,

Since FIFA 14, i found a "glitch" on all FIFA game but this year, it is far more complex.

Here is a list of the major glitch:

FIFA 14 (UT): unlimited packet (last won) + no loss (P2P game)

FIFA 15 (UT): No loss

FIFA 16 (UT): no loss

FIFA 17 (UT): no loss ()

FIFA 18 (UT): no loss (every mode but not for FUT champions)

FIFA 19 (UT): no loss (if the score is draw) and on all p2p game mode.

I don't use the "hotspot glitch" or "ddos attack". in the past, my glitch work on the game like this:

1) If i won the game: i won and my opponent don't have the loss.

2) if is it draw: nobody have the loss or win.

3) if i loss: i don't have the loss and my opponent have the won.

This year, all mode of UT (except single & vs friends) the game is hosted by EA. I did some tests (software glitch on OS of PS4 and about the network) but did nothing about it.

I am currently working on the MITM attack on PS4.

If anyone has ideas, I am listening attentively to everything that is being said. i'm pretty sure, several options are available.

Thank you for reading my message and sorry for my english, this is not my mother language.

Hey,

If you found something, i'm taking it.

I have try DDOS and some others tips, but its hard with the server EA.

PM if you have Discord.

Hello

i'm working on other tips too.

yes, i have discord, can you send me your discord? i can't reply in private message :(

Pass Candy - January 23, 2019, 12:47 pm

You can't ddos ea's dedicated servers.

Did you find something?

Benja77 - July 11, 2019, 6:31 am

I like fifa and coins ;p but i'm poor in fut
