Thread: [Problem with Firefox crashing after new SSH keys](#)

Ki11Mach - January 4, 2019, 5:35 pm

Hello, I am new to Linux and am running a Kali box. Recently, I just tried to update my SSH keys to better secure it and ended up screwing something up. Now every time I try and run Firefox, it immediately crashes. I have tried running it in safe mode and the same issue occurs. Any help or advice would be appreciated.

Have you tried removing and reinstalling Firefox?

```
Code sudo apt purge firefox  
sudo apt install firefox
```

Hey thanks again Disease, For some reason after removing and then reinstalling the same error persists. I will keep messing around with it and if I find a fix Ill post it.
