Thread: [Which Linux Distribution?](#)

Ram - January 8, 2019, 5:03 am

I am wondering on which Linux Distribution do you use and why do you use that specific distribution. Post your discussion and examples here.

pwnedcrypto - January 10, 2019, 7:37 pm

I probably work with Fedora the most, but other than that I work with *BSD mainly. GhostBSD because of a graphical interface, and OpenBSD due to its nature.

CyberError - January 10, 2019, 7:38 pm

Ubuntu , because its famous stable and i like the Desktop environment as well

Ram - January 11, 2019, 11:44 am

(Jan 10, 2019 08:38 PM)CyberError Wrote: [\[CITE\]](#) Ubuntu , because its famous stable and i like the Desktop environment as well

I use ubuntu as my fav, but sometimes have a need for other linux distributions.

Cannot Compute - January 11, 2019, 2:26 pm

Arch, because I like setting my own shit up how I like.

What he said

DrDoof - January 11, 2019, 2:54 pm

Ubuntu, no need to make it harder for yourself. It's very stable and it works. I'd rather spend more time on getting shit done than debugging system bugs.

Deathbox - January 11, 2019, 8:26 pm

Arch is great for getting your feet wet and you learn a lot more than you do with Ubuntu. For servers it's always between Arch, Debian and FreeBSD for me. Some software just isn't on BSD although FreeBSD has the best networking stack. Debian is also very stable and I used it for many years during school through to college. Arch is my preference although I don't recommend it for servers, I do personally. I've had no problems with arch servers, it's usually user error when arch or freebsd complains.

F11 - January 11, 2019, 9:31 pm

I'm new to Linux. A few days ago I had enough of Windows and said screw it and wiped my drive and installed Ubuntu 18.04. So far I'm liking it and it's not too bad to learn starting off.

I chose Ubuntu 18.04 because it's the most recent stable I believe.

PerfectStorm - January 11, 2019, 9:33 pm

ima go with Debian because Kali

Mikutype - January 11, 2019, 9:47 pm

Debian, ubuntu (I prefer debian really), devuan (debian is easier but devuan is very good imo).
Arch only tinkering to learn linux (I like that)

Ram - January 12, 2019, 1:11 pm

DEbians are good for servers right?

Mikutype - January 16, 2019, 2:36 pm

They are everywhere. Will depend of what you consider to be good.

Ram - January 16, 2019, 2:36 pm

I just heard some people prefer it more over other.

datguy.dev - January 16, 2019, 9:16 pm

This question for the poll is too vague to have substantial results. I use CentOS for servers. But I use whatever is piled with Gnome 3 for a personal desktop. Ubuntu if I'm in a don't give a fuck mood and just want stuff to work. :D Or Manjaro or Arch if I'm feeling edgy.

Athr - January 16, 2019, 9:19 pm

I use Debian testing as my daily driver.

pms - January 16, 2019, 9:45 pm

Debian because of Kali and usually get 0 errors, its amazing.

PerfectStorm - January 16, 2019, 9:50 pm

I am not sure what you mean by 0 errors but I think I disagree there.

pms - January 17, 2019, 12:38 am

No errors while doing what?

I have had plenty of errors In Kali

pms - January 17, 2019, 12:43 am

(Jan 17, 2019 01:41 AM)PerfectStorm Wrote: [\[CITE\]](#) No errors while doing what?

I have had plenty of errors In Kali

I usually dont face any issues installing/running kali. Just once my BIOS got fucked up.

sh4moon - January 17, 2019, 10:51 am

Accidentally put other in the poll. I use Debian. More specifically Kali. It's the first Linux distro I ever

used and I haven't had a reason to switch. I want to try out Ubuntu at some point though.

FriendZone - January 17, 2019, 4:15 pm

Have you started directly with kali?

It's probably the most different debian distro especially for his strict sec policies

I started with Wheezy, then kali/ubuntu

Effexion - January 17, 2019, 4:16 pm

Every time I have installed it I have used Ubuntu because my mate that knows his shit swears by it. Always end up back on Windows and hate myself for it lol.

sh4moon - January 17, 2019, 4:38 pm

I'm stubborn so I disregarded all warnings and went straight to Kali lol. it wasn't terrible but there is a bit of a learning curve. I've learned a lot by using it (which I probably could've learned on Ubuntu or something). I've actually only been doing this stuff for a little over a year, but I never really had a skid/ratter phase so it has been well spent.

I started using linux in general at uni and I love it but I mainly use windows still lol

Capn_N3m0 - January 25, 2019, 11:23 am

I've got win8.1 on this laptop, with UbuntuStudio for multimedia production, and I've been trying to get an arch install going, but have had install issues. I've got another old single-core Panasonic Toughbook with Slack13.37 on it for my bug-out-bag, and I've got other boxes running slackware with the modern SMP Kernel, one slack8.1 box that's basically my rsync box, a fileserver running a heavily modified/semi-hardened Debian distro that I've been thinking about switching over to FreeBSD, and another rinky box somewhere that I experiment with.

I've also got a few Raspian toys lying around for various things.
