Thread: [get root access with aspx shell](#)

Uploader.sx - January 8, 2019, 3:14 pm

Hello guys,

I have an aspx shell on a windows website, but I do not have root access.

Can anyone teach me how to get root access?

You have an unprivileged access so you should start enumerating the host and post some result in order to be helped

How should I do that?

Thank you for helping

You should use a both tools like Mimikatz, windows-privesc-check (from pentestmonkey) and manual checks. At the end of the process you shoul have a listo of:

- interesting readable/writable files
- user list
- sam backup file if readable
- programmed tasks/events

Please checks also tutorials from pentestmonkey blog about windows priviledge escalation and update this thread :)

Run some RAT on the box. First check for antivirus then run the RAT or hvnc.
