Thread: [How well can you see?](#)

webdev77 - January 10, 2019, 8:10 am

So long story short, I have decided I don't want to wear contacts anymore. I'm going to do the thing where your eyeballs get sliced open and lasers shot into them. Some people just call it Lasik.

With my contacts I could see 20/15. There is a pretty good chance (>80%) I will see at least 20/15 or better following my surgery based on the mappings of my eyes, which is absolutely amazing. I know that most people can only get to 20/20 with Lasik.

So HF how well do you see? Would you ever consider ditching your glasses/contacts?

Update: All is good here. I do indeed now see 20/15 as expected without any contacts or glasses.

Opticals - January 10, 2019, 8:12 am

I hate wearing my glasses but without them I can only see well about 20 feet and then everything gets a little blurry.

I remember when I first got glasses and putting them on, everything got so vivid and clear.

I'd love to get Lasik but it honestly scares the fuck out of me.

Bacardi Cola Lime - January 10, 2019, 8:34 am

Wearing glasses when at home and contact lenses when I'm out. I want to get rid of them both, enough.

I plan on doing eye surgery after summer 2019, already putting money aside.

How much the operation you look at will cost?

clownzfu - January 10, 2019, 8:35 am

Glasses help me see but im able to change lenses to another set of frames without glasses on so i guess i see ok haha.

oRequiem - January 10, 2019, 8:36 am

I feel like I see somewhat fine, but need glasses for when I drive.

I can see why a little bit, hard to even see people's faces when they're kinda far away.

flavoral - January 10, 2019, 8:37 am

I think it will depend on your location

Bacardi Cola Lime - January 10, 2019, 8:43 am

(Jan 10, 2019 09:37 AM)flavoral Wrote: [\[CITE\]](#) I think it will depend on your location

They've asked me for 800-1000 euros per eye.

frankln - January 10, 2019, 9:00 am

never had to wear glasses even though i've been on screens whole life

Stevensan - January 10, 2019, 9:04 am

I had also lasered my eyes in 2006. I had lasered my eyes with PRK. It was very painful. Now they have much better techniques. The best way to laser your eyes is with TransPRK. It is not painful and your eyes heal much faster. Lasering your eyes with Lasik is not good. Your cornea will never heal.

Dennis - January 10, 2019, 9:22 am

My bro in law did it last year. He was at +5 diopter (idk wtf its called in English). Payed €4000. Everything went well :)

I am at +1 on both eyes but that's not much. I sometimes forget my glasses at home lol
At this point in time, I certainly wouldn't go through the same process.

Winds - January 10, 2019, 9:24 am

I don't have glasses/lenses at the moment, so I guess I can see pretty well

FaggNigg - January 10, 2019, 9:25 am

wearing glasses all my life, aint that bad since they add some fashion bonus as well

luke - January 10, 2019, 9:27 am

I have a stigmatism which means my vision is shitty without glasses.

lexususa - January 10, 2019, 9:36 am

Did you hear about the blonde news reporter who committed suicide after receiving Lasik treatment?
Maybe you should stick with contacts.

My vision has always been superior, maybe it has deteriorated a bit since my childhood but, not much.

Roytoy - January 10, 2019, 10:03 am

I got a lasic surgery for my eyes (had -3.5 and used to wear glasses) Now I think I only got like a quarter in both eyes. (surgery was like 6 years ago)

webdev77 - January 10, 2019, 10:06 am

(Jan 10, 2019 09:37 AM)flavoral Wrote: [\[CITE\]](#) I think it will depend on your location

That is correct. It depends on a lot of factors. Mine is roughly \$4000, which includes a number of follow up appointments, prescription steroid drops, artificial tears, etc. Realistically, it's the price of 10 years worth of eye exams + contacts. So as long as it lasts 10 years, I come out ahead.

(Jan 10, 2019 10:36 AM)lexususa Wrote: [\[CITE\]](#) Did you hear about the blonde news reporter who committed suicide after receiving Lasik treatment?

My vision has always been superior, maybe it has deteriorated a bit since my childhood but, not much.

I have indeed heard all about it and all of the risks. My procedure is different from hers although does indeed carry similar risks.

PerfectStorm - January 10, 2019, 10:11 am

Im pretty sure I am still 20/20 vision without anything added.

webdev77 - January 10, 2019, 10:13 am

(Jan 10, 2019 10:04 AM)Stevensan Wrote: [\[CITE\]](#) I had also lasered my eyes in 2006. I had lasered my eyes with PRK. It was very painful. Now they have much better techniques. The best way to

laser your eyes is with TransPRK. It is not painful and your eyes heal much faster. Lasering your eyes with Lasik is not good. Your cornea will never heal.

Your cornea does heal, just in a reshaped manner. PRK is not always better than lasik. It is different. It is better for some people, typically those with worse vision to begin with. Any decent center does PRK, Lasik, and several other refractive surgery types. Doctors pick the best one based on your eye mappings.

Mix - January 10, 2019, 10:20 am

Considering I spend about 6-8 hours in front of a screen a day, and still dont need glasses i find myself very lucky. I cant remeber what my last eye test results were sadly.

Ram - January 10, 2019, 10:21 am

Considering I was gaming 24/7 since 8th grade I'm seeing completely normal.

Stevensan - January 10, 2019, 10:50 am

(Jan 10, 2019 11:13 AM)webdev77 Wrote: [\[CITE\]](#) Your cornea does heal, just in a reshaped manner. PRK is not always better than lasik. It is different. Doctors pick the best one based on your eye mappings.

Your cornea flap can get loose if you get hit by something. My cornea is 100% healed. In my opinion they should forbid Lasik. The only good Lasik method is EPI-Lasik because it is almost the same as PRK. They remove a small part of your cornea then it will grow back.

Omniscient - January 10, 2019, 11:02 am

Get Lasik. It works great. Wife got it. Works wonders. But ask if you'll need to get adjusted again and when. It could be 5,10, or 20 years but most Lasik needs touch up but you will definitely be happy with results.

gore - January 10, 2019, 12:28 pm

I can see perfectly without glasses but I have some for being mildly farsighted. I get migraines so the glasses are pretty much just a tool to help when I start getting one.

webdev77 - January 10, 2019, 12:37 pm

(Jan 10, 2019 12:02 PM)Omniscient Wrote: [\[CITE\]](#) Get Lasik. It works great. Wife got it. Works wonders. But ask if you'll need to get adjusted again and when. It could be 5,10, or 20 years but most Lasik needs touch up but you will definitely be happy with results.

I am getting it done less than 24 hours from now. I've been out of contacts for a few weeks and will be more than ready to see again. A few of my family members have had it done as well. All excellent results. If I do end up having to get a touch up done later, it's "free"/included in original price as long as I use the same laser tech that exists now.

Assuming all goes well, I'll be seeing better than I am right now by tomorrow night.

Stevensan - January 10, 2019, 12:43 pm

I highly recommend you use other techniques like TransPRK and EPI-Lasik. Once your cornea is cut then it will never 100% heal.

<https://www.youtube.com/watch?v=6lUSpBL-TAM>

I'm going to trust doctors and the FDA over your own opinion. Yes injuries to your eyes are possible, especially when getting tackled by a 200lb+ NFL player, but the technology used now is significantly different from what was used nearly a decade ago.

Kosmos - January 10, 2019, 12:56 pm

I have horrible eyesight. I'm nearsighted, I've got astigmatism, and I go to the eye doctor in March for a screening of glaucoma. I would love to get a new pair of eyes.

Dope - January 10, 2019, 2:51 pm

A lot of close family got the surgery done and everything went well.. however- I see well, as far as in right now. I don't wear glasses.

Geass - January 10, 2019, 3:08 pm

(Jan 10, 2019 10:04 AM)Stevensan Wrote: [\[CITE\]](#) I had also lasered my eyes in 2006. I had lasered my eyes with PRK. It was very painful. Now they have much better techniques. how much time it took the laser?

example around half hour?

Lakai - January 10, 2019, 3:13 pm

20/20. Idk why but my vision stayed good thru puberty.

Stevensan - January 10, 2019, 3:44 pm

(Jan 10, 2019 04:08 PM)Geass Wrote: [\[CITE\]](#) how much time it took the laser?

Very fast approximately 5 minutes per eye. First they soak my cornea with alcohol. Then they remove the cornea. Then they laser my eye. The preparation is ridiculous long. I have waited a month for a 10 minutes surgery. Doing some eye tests.

Geass - January 10, 2019, 3:54 pm

(Jan 10, 2019 04:44 PM)Stevensan Wrote: [\[CITE\]](#) Very fast approximately 5 minutes per eye. First they soak my cornea with alcohol. Then they remove the cornea. Then they laser my eye. The preparation is ridiculous long. I have waited a month for a 10 minutes surgery. Doing some eye tests.

Awesome, thank you, I thought it would take too much time and can't say I have tolerance for pain, especially in sensitive spot like eyes. ?

bernie17 - January 10, 2019, 3:55 pm

my mom had this surgery done and she still needs glasses so be weary if it doesnt work.

Stevensan - January 10, 2019, 4:00 pm

(Jan 10, 2019 04:54 PM)Geass Wrote: [\[CITE\]](#) Awesome, thank you, I thought it would take too much time and can't say I have tolerance for pain, especially in sensitive spot like eyes. ?

At that time TransPRK and EPI-Lasik did not exist. Now they remove the cornea without alcohol.

Now it is painless.

Bluffer - January 10, 2019, 4:48 pm

I've worn glasses my whole life, don't see why I would change that. I think nothing of it. But obviously that means yes my eye sight isn't that good.

I could probably get contacts but like I said I just don't see the point.

Disease - January 10, 2019, 4:57 pm

20/20 these days. 10 years ago I tested out at 20/10. I might still be, but I did a Snellen Eye Test recently that went down to just 20/20 and while I read it fine, I doubt I'd be able to pick up the 20/10 line anymore.

My parents both wear glasses though. Neither of them started until they were in their 40s, however. So it's just something I'm cognizant of, as there's a chance I'll need reading glasses in my 40s/50s too. But fortunately, no real eye issues run in the family.

boost - January 10, 2019, 5:56 pm

My eyesight is horrible. Currently wear contacts -6.5 in both eyes. I've been debating on getting LASIK, wonder how much my eyesight will improve from where it's at.

My doc told me he recommends I wait till im finished with school or wait for this new method to come out:

<https://www.forbes.com/sites/leebelltech/2018/05/31/non-invasive-vision-correction-innovation-could-prove-alternative-to-laser-eye-surgery/#55ae02a33301>

Interesting in knowing how your surgery goes tho

PerfectStorm - January 10, 2019, 5:57 pm

pubmaster - January 11, 2019, 2:28 am

+2.75 and +3.25 on my eyes. Probably gonna do laser surgery soon.

AnArtist173 - January 11, 2019, 3:09 am

My dream is to be fighter pilot.Dream.Myopia, 4.5 right 3.25 left and a bit of astigmatism(I do not remember the numbers, about 1-2 each eye).I used to wear glasses but when I hang out,doing sports etc. contact lenses is a must.Planning for laser too but I heard that it is possible to let you some degrees after the surgery.And you cant do it again.Also I read that can cause problems at change of pressure.Anyway.

webdev77 - January 11, 2019, 6:39 am

(Jan 10, 2019 04:08 PM)Geass Wrote: [\[CITE\]](#) how much time it took the laser? example around half hour?

It takes no more than 5 minutes per eye. Actual laser time is 30 to 90 seconds for most people. The entire time in the operating room is less than 7 minutes for most people.

(Jan 11, 2019 04:09 AM)AnArtist173 Wrote: [\[CITE\]](#) My dream is to be fighter pilot.Dream.Myopia, 4.5 right 3.25 left and a bit of astigmatism(I do not remember the numbers, about 1-2 each eye).I used to wear glasses but when I hang out,doing sports etc. contact lenses is a must.Planning for laser too but I heard that it is possible to let you some degrees after the surgery.And you cant do it again.Also I read that can cause problems at change of pressure.Anyway.

You should check with a current pilot or service member to see if you would even be eligible post-surgery. From what I understand, certain military positions don't accept those who have had refractive surgery. Some do, some don't. Changes in pressure are only a problem for during healing. It takes as long as six months for you to be completely healed to the point where another optometrist/eye doctor might not know you have had corrections made.

Eagle 95 - January 11, 2019, 6:49 am

I wear glasses to see better, nothing major but still gotta wear them. I've considered Lasik, too so please, keep us updated. I know a few people that did Lasik without any problems so good luck to you, too!

webdev77 - January 11, 2019, 6:57 am

what is your prescription for contacts? GL man, looking forward to the update.

Ram - January 11, 2019, 1:26 pm

Does anyone have any protective glasses that you wear during working on pc and which ones do you use if yes.

webdev77 - January 11, 2019, 2:44 pm

(Jan 11, 2019 12:48 PM)boo5t Wrote: [\[CITE\]](#) what is your prescription for contacts? GL man, looking forward to the update.

It was -1.75 and -1.5. Relatively little, but enough that I couldn't read things more than a few feet away. at any great distance.

My post-lasik update:

Getting the procedure done is truly pain free. You cannot tell when a flap is actually made nor do you really notice what the doctor does. As expected, it only took less than 10 minutes for both eyes to be done. I was checked by another optometrist and I was sent on my way. I slept for about 3.5 hours following my procedure. Now I'm up again and feel pretty much fine. No major pain or other problems. Only 4 hours later, I can see quite well, aside from a little blurriness and halos around lights. Both are to be expected. It does indeed take several days maybe weeks before some of the halos go away which are largely a result of the corneal flap not being healed all the way yet. My vision should change a bit of the next coming weeks. Overall, all is excellent so far.

Good to hear! Thanks for sharing.

Deany - January 11, 2019, 3:16 pm

I used to be able to see very well, now it's complete shit.

Psilocybe - January 11, 2019, 3:18 pm

I've got astigmatism so I can see some things very well, but any sort of distance absolutely kills my vision. I wore glasses for a couple years but converted to contacts for comfort reasons & my vision is pretty damn good with them

Elysium - January 11, 2019, 3:19 pm

I'm lucky in regards to eyesight. I have 20/15 vision in both eyes. If only I were as lucky with my hearing.

z_Goon - January 11, 2019, 3:20 pm

I have 20/20 vision. (I think? Potentially 20/15, I haven't take a test in year)

If I get a headache I can mostly pinpoint the cause, nothing gets blurry.

There are these "Blue light" glasses I wear that aren't prescription when I'm working at a project involving extended computer use.

Seems to cause no harm, but only time will tell if my eyesight will stay like it

Louis - January 11, 2019, 4:14 pm

Mostly fine i only have to wear glasses every now and then

Sombre - January 11, 2019, 5:26 pm

I had pretty good vision back in high school, I was tested for Football. I haven't got tested since though.

Mr. Kim - January 11, 2019, 6:07 pm

Allegedly I had 20/15 last time I was at the eye doctor, though I feel personally like my eyesight is not the best. So perhaps I have some weird thing were my eyes work best at around 20 feet, but suck ass at 40 and 1 feet distances.

The 100 - January 11, 2019, 6:34 pm

20/20 right here bro. Atleast that what it was a few years ago. May have decreased since. Possibly

Athr - January 11, 2019, 6:40 pm

I've been wearing glasses since my first grade.

bananachocobo - January 11, 2019, 11:52 pm

I don't like wearing glasses and contacts but damn reading the laser procedure makes me want to wear glasses instead. Or just let my poor eyesight be. Lol.

Eagle 95 - January 12, 2019, 12:54 am

(Jan 11, 2019 03:44 PM)webdev77 Wrote: [CITE](#) It was -1.75 and -1.5. Relatively little, but enough that I couldn't read things more than a few feet away. at any great distance.

Did you get some protective contacts to wear?

Teddybear2018 - January 12, 2019, 1:18 am

(Jan 10, 2019 09:10 AM)webdev77 Wrote: [\[CITE\]](#) So long story short, I have decided I don't want to wear contacts anymore. I'm going to do the thing where your eyeballs get sliced open and lasers shot into them. Some people just call it Lasik.

With my contacts I could see 20/15. There is a pretty good chance (>80%) I will see at least 20/15 or better following my surgery based on the mappings of my eyes, which is absolutely amazing. I know that most people can only get to 20/20 with Lasik.

So HF how well do you see? Would you ever consider ditching your glasses/contacts?
I hate surgeries, I would rather keep my glasses if need be.... ?

deltaone - January 12, 2019, 1:42 am

[Video: https://www.youtube.com/watch?v=_EMtPSpQfpk] i saw this once and lasik scared the shit out of me

webdev77 - January 12, 2019, 6:48 am

(Jan 12, 2019 01:54 AM)Eagle 95 Wrote: [\[CITE\]](#) Did you get some protective contacts to wear?
Nope. You actually don't want anything to touch your eyes for several days. Osmotic pressure holds the corneal flap back in place immediately after the procedure. Unless you told someone you had the procedure done, there is no visual clues. My eyes are not even bloodshot or red. All I have is eye shields to wear at night while sleeping so as not to accidentally try to scratch my eyes. Sunglasses are also provided as some people are pretty light sensitive, but I have not found that to be a problem personally.

(Jan 12, 2019 02:18 AM)Teddybear2018 Wrote: [\[CITE\]](#) I hate surgeries, I would rather keep my glasses if need be.... ?

That's a valid point. It's not for everyone. A day later, it was by far the easiest procedure I've done. If today were a work day, I would be at work and nobody would be any the wiser.

boost - January 12, 2019, 11:22 am

Is dry eyes an issue? Do you wear anytime kind of solution/eye drops frequently?

webdev77 - January 12, 2019, 11:58 am

(Jan 12, 2019 12:22 PM)boo5t Wrote: [\[CITE\]](#) Is dry eyes an issue? Do you wear anytime kind of solution/eye drops frequently?

I think it's too soon to know if that will really be bothersome for me or not. I'm still using two different prescription drops that are meant to prevent infection and swelling of the eyes. One of them is a milk consistency that does a very good job of keeping eyes wet feeling. I also have artificial tears that I am supposed to be using a few times a day for the next week.

After the first week is up, I won't have to use any kind of drop unless I feel the need to use the tears. For now at least, I feel like I could probably stop using all drops and be fine, but I'm definitely not going to risk that.

(Jan 12, 2019 12:58 PM)webdev77 Wrote: [\[CITE\]](#) I think it's too soon to know if that will really be bothersome for me or not. I'm still using two different prescription drops that are meant to prevent infection and swelling of the eyes. One of them is a milk consistency that does a very good job of keeping eyes wet feeling. I also have artificial tears that I am supposed to be using a few times a day for the next week.

After the first week is up, I won't have to use any kind of drop unless I feel the need to use the tears. For now at least, I feel like I could probably stop using all drops and be fine, but I'm definitely not going to risk that.

I see, hopefully you'll be good. I've read some reviews of people saying they've had dried eyes for months because of the surgery. But I def wanna get it done one day. Hate coming home late at night then having to take off contacts.

I 100% relate to that fact. I've slept with contacts in a few times by accident. Not a great way to wake up the next day. Everyone is a bit different for the surgery. As of right now, I would highly recommend getting a free consultation from the best place in your area to check and see that you actually can get it done some day.

I don't but my monitor(s) are all set to ultra-low blue light right now. White is basically orange.

No I let the screen burn off my eyes ?

Eagle 95 - January 15, 2019, 12:02 pm

How are you feeling after few days of surgery?

Ram - January 15, 2019, 1:50 pm

Very good. I'm still required to be using drops four times a day, but I have not felt a need to be reaching for any artificial tears. My vision is not fluctuating and is remaining steady so that's a very good thing. I have no complaints of dry eyes. It's more of a chore to put drops in than something I really feel a need to do at this point.

Zyptic - January 15, 2019, 2:00 pm

I can see extremely well close up but can't see far away like small print. I refuse to wear glasses or contacts cause it's a crutch for your eyes they'll get weaker over time.

Not really true. It's the shape of your cornea that is what really affects how well you see. If the

shape changes, you might not see as well. It's not a weakness.

So been about 2 weeks now. Your eyes feel completely normal now with just perfect vision?

webdev77 - January 26, 2019, 8:39 am

I feel completely normal. My vision is pretty much perfect. Halos/glow from lights at night are beginning to subside and are expected to be gone completely over the next few weeks. I only really noticed that even still happens at the eye doctor in a dark room looking at a bright display.

So far, I am quite satisfied with the results and am thoroughly enjoying not wearing glasses or contacts.

Ravioli - January 26, 2019, 10:10 am

I have 25/20 vision. However I have HPPD at the same time so I see constant visual snow. It's only annoying when I read tbh.

Good to hear all went all. I wanna get it within 1-2 years from now. My -6.5 vision is horrible ?

Ram - January 27, 2019, 12:29 pm

I have more hearing problems then vision ones.
