Thread: [Help me make banner responsive \(mobile friendly\)](#)

Sophoclito - January 11, 2019, 2:52 am

Hey hey guys !

Anyone could help me out real quick on how to make the banner of my website responsive ? (I want it to resize with the page, and accordingly when browsed with a phone)

It's wp theme originally, but doesn't seem to offer on default...

Thanks in advance ! (I will shoot you the link in PM)

Add max-width: 100% or width: 100% (depending on your likings) to the img.

This will probably work, depending on the rest of the styling. If you post/PM a link I can look into it for you.

Tried that already and it doesn't change anything
