Thread: [Hydra Password Cracker for Linux UBUNTU download command line](#)

NFH Vituperate - January 14, 2019, 7:15 pm

First, you are going to have to do basic steps in order to update terminal so below just copy and paste into your terminal.

```
Code sudo apt-get update
sudo apt-get upgrade
sudo apt-get dist-upgrade
Once you do this build the essentials
```

```
Code sudo apt-get -y install build-essential
sudo apt-get install git
This Next step may take some time depending on wifi connection so sit back and relax for a little bit.
```

```
Code sudo apt-get install libssl-dev libssh-dev libidn11-dev libpcre3-dev libgtk2.0-dev
libmysqlclient-dev libpq-dev libsvn-dev firebird-dev libncp-dev
git cloneAt the end of te above command line make sure to add
(https://:)github(.)com/vanhauser-thc/thc-hydra.git
Sorry I cannot post links. Just take away the () symbols
```

Once that is done make sure to change your directory into the "thc-hydra" directory

```
Code cd thc-hydra
now configure
```

```
Code ./configure
then make
```

```
Code Make
Code sudo make install
```

If you did the above steps correctly then type the below statement into your shell and make sure its running.

```
hydra -help
```

Now lets get the VR running, just copy and paste into your terminal.

```
Code sudo apt-get install gtk2.0
```

```
cd thc-hydra/hydra-gtk
```

```
./configure
make
sudo make install
```

Once this is done type the below statement into your terminal to run the program.

"xhydra"
