Correct me if I'm wrong. Even if they are infected, You can create some virtual box machine on Your Linux / Mac computer and turn this software in Sandboxie. What You think about this? Is it good way to turn on some apps downloaded from internet?

Yea this is a good point. But in the grand scheme of things is a bad idea still because the backdorers (or the person who backdoored it originally) could have a way to steal the clients connecting to you :) trust me that's easily possible

In as much as I want to agree with you, I don't think the UNKNOWN RAT is garbage and guaranteed backdoored. Simply put you have difficulties using this type of RAT because from most people I've installed it for are enjoying it and most especially when it's exploited.

However the Spynote is a quality RAT, but I can say I go with the Unknown RAT anyday and anytime.

Can someone explain why can't people use ProGuard to obfuscate their Unknown RAT stub? Iv used it when the RAT was available and it worked like a charm. :)

andrewtaylor22 - August 30, 2020, 7:59 pm

Unknown rat is not working again and there is no crypter for the bullshits some people are sharing here, patiently wait for the unknown guys to upgrade or relaunch fresh stuff
