Thread: [\[FREE\] The Most advanced Cloudflare resolver.](#)

LimitlessJeff - January 17, 2019, 3:07 pm

So basically, I've been trying to learn more about PHP, by doing this I thought the best solution would be able to make an Cloudflare resolver that actually works, (ish) Better than most resolvers around here.

Most resolvers use sub-domains from a .txt file and pings each one hoping that the website hasn't covered it like a bypass?

Like this:

```
Code subdomains = ["ftp", "cpanel", "webmail", "forum", "direct-connect", "vb", "forums", "home", "direct", "mail", "access", "admin", "administrator", "email", "downloads", "ssh", "webmin", "paralel", "parallels", "www0", "www", "www1", "www2", "www3", "www4", "www5"]
```

The advanced one uses SSL and other types of searches to look the IP address up.

```
w/w/w unsubstantiated-jeo.000webhostapp // com/index.php?url=
```

Nachfolger - January 17, 2019, 3:15 pm

For anyone lazy: http://unsubstantiated-jeo.000webhostapp.com/key.php?url=enter_url

Doesn't seem to have updated DNS results, fetching old IP addresses, etc.

(Jan 17, 2019 04:07 PM)LimitlessJeff Wrote: [\[CITE\]](#) So I've been trying to learn how to code PHP, starting simple, by doing this I thought I've release tools and API's I've been working on or trying to work on and that helps me code PHP, so its a win/win situation.

Today I've finished the advanced Cloudflare resolver that doesn't just use a ping command on a set sub-domains that most people do. (Not slating) with the help from V3t3r4n I've managed to finish the free API.

(remove the // before com)

```
unsubstantiated-jeo.000webhostapp // com/key.php?url=
```

Yes I'm using SPAM because am poor..legit haha, however I hope you enjoy it.

IMGUR URL /NQqd18v.png

Sorry about the messy Links Im not allowed to post links yet.

The api would be even better when the response would be parseable.

Use JSON or XML to do that.

Use JSON or XML to do that.

Updated instead of /key.php use cf.php?url= or use both

t0deep4chan - January 19, 2019, 9:00 am

May i get the source of this? It's quite generous of you to put it on hackforums. Thanks.

itsjinx - January 22, 2019, 5:44 pm

the site is already down. please repost

LimitlessJeff - January 23, 2019, 1:44 am

unsubstantiated-jeo.000webhostapp//com/cf.php?url=

Dotexe - January 23, 2019, 3:48 am

Why do you upload this on free webhost ?

You need like 10 bucks. If you can afford paying your ISP, you can pay for this one as well :D

LimitlessJeff - January 23, 2019, 11:44 pm

Its hard living on your ones man, relax.
