Thread: [DNS vs HTTP for security. DNS vs VPS](#)

BigFatDogShit - January 17, 2019, 10:24 pm

I read a debate on here recently about making a Botnet in DNS being more secure than HTTP

but also you'd host a Botnet on a DNS or VPS so dumb question but you can DNS Botnet on a DNS? or would they just be in 1 instead of 1 on 1?

El Lobo - January 18, 2019, 1:07 am

You need to stop making threads with retarded queries. All answers to your questions can be found with a simple google search.

#Skyline - January 18, 2019, 1:27 am

Fuck you don't stop asking stupid shit.

If he used the comma properly in his sentence we wouldnt need to guess what did he ment when he wrote this:

Quote:Fuck you don't stop asking stupid shit.

The first case where comma is properly used:

Quote:Fuck, you don't stop asking stupid shit.

The second:

Quote:Fuck you,don't stop asking stupid shit.

Now, do you see the difference.

Nah bra, I say it all in one fucking go.

Fuck you don't stop saying stupid shit.

Maybe i have lost touch with it all but a botnet on a DNS? ey

I'm pretty lost now. DNS as in dynamic name server? Completely baffled.

So not Botnet on a DNS

But a Botnet can be made from DNS instead of HTTP for more security?
