Thread: [is nanocore still viable?](#)

winou - January 24, 2019, 6:18 pm

hi, i want to ask if nanocore still has great reverse proxy and password grabber feature? if it doesnt what other rat with that features u would reccomend for free?

Riyu - January 24, 2019, 6:19 pm

Quasar is probably the best alternative.

winou - January 24, 2019, 6:21 pm

Mainly because the devs who create dotnet crypters like to only target dotnet 2.0 only, and quasar is built using 4.0 features.

Sounds like you wanna do crime with it.

The owner of Nanocore is in the Jail,do your thing and in the next time you sitting next to him....

The creator pleaded guilty in court to using it maliciously

I read that there is an conversation chat between the creator and his client that he acknowledge they will using it to malicious act.

Ramb0x - January 26, 2019, 6:44 pm

What type of program is this nanocore that the developer is in jail?

Dovahkin - January 27, 2019, 12:05 am

Nanocore is in my opinion still a good "phase 2"(For use after a machine has been prepped for more packages, IE after an antivirus has been taken care of.) tool. I use it to mainly load other payloads to a machine, such as the very old but fun DarkComet.

I find the UI is still very nice, while it doesn't really do much out of box. I am sure there are better options around, but I personally find that it isn't a bad option either. Of course, what you do with a RAT is your own bed to make.

Cyber86 - January 27, 2019, 12:17 am

I liked nanocore, just be sure it can run on a full updated windows 10.

Runtime detection probably has nano fully mapped though, so as the above poster said, its good for after windows defender and AV have been disabled.

A rat. Duh.

Redwolf3221 - January 31, 2019, 4:34 am

i mean that the Poster of this Thread wanna do a crime with it because he asking to Passsword Grabber & Reverse Proxy sounds like he wanna do Fraud...

Nanocore doesnt exist anymore because the guys allways just use them like a Blackhat...
