Hi, I just got a new gaming pc (i5 3470, GTX 1050ti, 8g ddr3) and I was wondering if there was any good open world (third or first person) games out there for a pretty good price. If you know of a good game then that would be great. Also, I'm into customizability, so any games like that are also pretty good. I have already played:

- Just Cause 3
- GTA V
- Fallout 4

The Far Cry series is pretty good you should check those games out. Grand Theft Auto is okay I guess but it is dated at this point. Also try MMO plenty of good ones around. Just gotta find the one that fits you and you can get into.
