Riddick - February 2, 2019, 5:18 pm

Why does yours show a .jpg as "Exe Files" and mine shows .jpg as "JPG File"?

Geass - February 3, 2019, 2:37 am

OP got Community alert against him:

<https://hackforums.net/showthread.php?tid=5933880>

Check out before dealing, deal at your own risk ?

Ren And Stimpy - February 3, 2019, 2:47 am

Interested. Contact via PM!

NYANxCAT - February 3, 2019, 4:20 am

Post just to subscribe.

Good luck with sales, you really need it.

Vuln - February 3, 2019, 4:30 am

(Feb 2, 2019 06:18 PM)War Machine Wrote: [\[CITE\]](#) Why does yours show a .jpg as "Exe Files" and mine shows .jpg as "JPG File"?

Because of

https://docs.microsoft.com/en-us/dotnet/api/system.windows.forms.filedialog.filter?view=netframework-4.7.2#System_Windows_Forms_FileDialog_Filter

You should also make some good popcorn because this thread will be interesting after a few hours.

Dream - February 3, 2019, 4:48 am

(Feb 3, 2019 05:43 AM)??` NYAN CAT ?? Wrote: [\[CITE\]](#) You should also make some good popcorn because this thread will be interesting after a few hours.

I will wait for a trusted user to vouch first, there is no way to risk be the first customer.

oh I just saw the scam report, you were right.

Partner of mine, not here on HackForums.

Jacque Fresco - February 3, 2019, 6:42 am

I debunked endless jpg exploits threads in the past. A video alone does not prove the working of your script.

Lets see here hm the picture is: 408kb in size on the ntfs disk. And the 'exploited' pic is 816 on the ntfs disk. Thats exactly the * 2 of the original pic.

Lets see again. You downloaded putty x64 and it has a filesize of 836kb on the disk. So that even bigger than the 'exploited' picture.

Something is wrong here.

However please create another video with the process hacker 2 application open and so that every(!) process is visible and the refresh interval on fast (0.5sec). Unless you are using a rootkit we should see which process really spawns putty ^^

NYANxCAT - February 3, 2019, 6:57 am

there is actually also a Community Alert on the Forum about him (about another topic but that should raise awareness): <https://hackforums.net/showthread.php?tid=5933880>

akarabread - February 4, 2019, 7:27 am

vouches and testimonials will be appreciated.

Dotexe - February 4, 2019, 7:29 am

Edit : Didn't saw the video.

notDiscoli - February 4, 2019, 9:20 am

It's possible to have a jpg be a video too depending on the extension, but not jpg being an exe like this, this is a big doubt, and also a reason why I'm calling bull is because it'd have to be an exploit in the image viewer to somehow fuck up and launch it as an exe.

nah nah nah

Grammer - February 4, 2019, 9:44 am

I'm the product developer. You can ask all your questions by private message.

I can vouch for this. PM him if you have any questions regarding the software.

FormerlyS - February 4, 2019, 10:03 am

Ok let me explain:

In the browser, file extensions aren't really a real thing, they're just kept as analog as possible to desktop file extensions. That's the reason why you can upload a jpg file on imgur and link to it as a .gif and it will still work. This is because of something called a MIME type, which is specified in the header. This is something managed by the HTTP protocol, not by the file system. The MIME type is independent of the URL and thus the ".png" or ".jpg" in the URL bar. In the browser, this is the ONLY way your browser identifies file types and acts based upon its value.

On desktop, the FILE EXTENSION is the ONLY way the system decides how to treat a file. Because of this, it is IMPOSSIBLE to have an actual .JPG file treated as .EXE. The way these 'spoofs' normally work is through user deception. The way shown in the video here is not possible, as the system simply wouldn't know how to execute the code inside the image file, even if it were present. Which in itself is also impossible, as some users have said, because the file is too small. The only way it would be possible (if the file were larger, which it isn't, so this video is def fake), is if it indeed were an exploit in the image viewer, and then still it would only work with that viewer and not any other. A generic extension spoof is impossible

AlienAnonymous - February 4, 2019, 10:12 am

Is there a way to create a fully functioning .exe and simply 'wrap' it in whatever a .jpg presents itself as?

daymon - February 4, 2019, 10:18 am

(Feb 4, 2019 11:12 AM)AlienAnonymous Wrote: [\[CITE\]](#) Is there a way to create a fully functioning .exe and simply 'wrap' it in whatever a .jpg presents itself as?

That would (essentially) be the exploit talked about above. Which would have to be an exploit of whatever image viewer is loading the file itself.

Bossk - February 4, 2019, 10:51 am

\$1000 ??? lol

upload one of your files for us to inspect.

Jacque Fresco - February 4, 2019, 11:02 am

(Feb 4, 2019 10:44 AM)Grammer Wrote: [\[CITE\]](#) I'm the product developer. You can ask all your questions by private message.

Answer them for us all. How does the exploit work? Does it work on every OS (All windows/Linux/Mac)? Also on every Image Viewer? Any limitations at all? Also answer my latest question in the thread.

EnigmaF0x - February 4, 2019, 11:10 am

I can vouch 100% fake. There is no CVE related to JPG recently patched by MS. It can only be a 0day. And if it is a 0day it won't be 1000\$ and developer would sell it on zerodium or some other platform where he can get several 100k\$...

NYANxCAT - February 4, 2019, 11:11 am

(Feb 4, 2019 10:44 AM)Grammer Wrote: [\[CITE\]](#) I'm the product developer. You can ask all your questions by private message.

This is a sale thread so no need for PM. Everybody should ask here.

BUT if any member wants support then try to use the PM button.

So can you tell us more about this exploit? does it work with all windows xp-10?

Capital - February 4, 2019, 11:13 am

idk if you guys notice this but you keep bumping his thread for him. ?

Open a community alert with facts instead.

Open a community alert with facts instead.

@FormerlyS since you know well about this things would be great help to open a community alert as Winstar suggests.

I would do it myself but I don't know nothing about this kind of exploits.

@Winstar It is 4 pages with negative comments, I don't think this bump will be any help to him.

goldpill - February 4, 2019, 2:07 pm

I don't know about this guy, but a friend but an exe to jpg builder he says works. I wait to see him build one in an hour or so, will know how true it is to start with.

sagamatete - February 4, 2019, 6:24 pm

has any one tried this. need trust people to vouch for this

simpleme201 - February 4, 2019, 7:16 pm

its a dummy exploit dont fall victim,.

kray - February 5, 2019, 2:40 am

(Feb 3, 2019 05:43 AM)??` NYAN CAT ?? Wrote: [\[CITE\]](#) You should also make some good popcorn because this thread will be interesting after a few hours.
underwhelming.

If this is real is really questionable as to why OP chose not to mention any of the constraints of this exploit. Surely its not cross platform, and what exactly is undetectable? Are you saying your malware is going to run on the image viewer's process, and the AV will somehow ignore the image viewer's newfound affinity for.. presumably networking and file scanning..

Universex4 - February 7, 2019, 4:53 pm

Op is mia and speechless. He has no excuses guys now wat? Thread closing time

meridian1 - February 8, 2019, 4:44 am
