Thread: [Good Starting Point \(Help\)](#)

Perfect_Counter - February 3, 2019, 9:50 pm

Hello there fellow HF mates ?

Someone could share with me his or her share of collection ebooks that I could start off my personal ethical hacking learning from?

It would be highly helpful for a noob like me heeh.

Hope to hear from you soon

Learn about OS's as well as networking you will live in a shell most of the time, so BASH and Powershell or cmd will be your goto. Most of hacking is networking and OS's be it a bad config or sloppy admins who don't patch, either way you need to be the jack of all trades. Learn some coding, basically nothing at some point should be smoke and mirrors and a mixture of magic.

At some point you will want to dive deeper so books:

Penetration Testing: A Hands-On Introduction to Hacking

Violent Python: A Cookbook for Hackers, Forensic Analysts, Penetration Testers and Security Engineers

The Web Application Hacker's Handbook: Finding and Exploiting Security Flaws

The Shellcoder's Handbook: Discovering and Exploiting Security Holes

Cybrary.it is also an option, another important resource is <https://samsclass.info/> I also strongly suggest you get comfortable with coding as noted Python and C/CPP also if you are wanting to learn Web Application pentesting consider learning html/javascript/xml/php/sql.

Thank you for your time in laying out valuable tips for me.

Ok then, I'll fast read through all those stuffs and see where it gets me at.

I guess I have to ask uncle Google then.

Best of luck mate.
