Thread: [Advanced Cloudflare domain resolver](#)

**LimitlessJeff** - February 4, 2019, 7:45 am

~ACG~

They're two stages to this resolver so far, one using data that has been exploited via ssl, cloudflare config fu#k ups, requirements and so forth once exploited its then added to a database ready for a search query from the API user. If the website isn't in the database then it'd use a subdomain scanner (Basic I know)

to find info right there and then, I'm currently working on a stage three that searches in the past DNS records of the site with a good database connection, full of sources, grabbing the data, pinging the IP's and printing the appropriate sources for the API user.

Yes the API is hosted on SPAM, because im cheap basically./ Not anymore mfs

The FREE key for HF users only is: (hf:limitlessjeff)

PHP Code

<?php

network-deck.ml/cf/index.php?key=hf:limitlessjeff&url=[WEBSITE]

Its working perfectly Thanks for sharing ?

**ProMan** - February 11, 2019, 6:08 am

Nice, it's working.

Thanks for sharing this!

**KaizenLouie** - February 12, 2019, 5:10 am

you forgot to trim the "www" aliases before adding your "possible" aliases.

**sameunri** - February 12, 2019, 7:20 am

thanks for your effort!!

I'm checking now~

**p0p\_c0rn** - February 12, 2019, 12:32 pm

Tried with a site I go to but doesn't give me their true IP perhaps I am doing something wrong?
