Deleted the files already and my pc is offline, need someone to help me removing the infection thanks.

IGHalftime - February 4, 2019, 9:11 pm

u run malwarebytes?

25charrrr

Another option from Kaspersky, which I forgot to mention in my previous PM to you, is a live-boot antivirus scanner. Currently this is for Windows OS, so if you're on a MAC or use *nix systems, it won't do any good.

91 threats were detected and cleared the threat from malware bytes.

Be sure to reboot the system and conduct a deep scan once more to be sure. These things sometimes have a nasty habit of hiding very well and (rarely) replicating.
