Thread: [Looking for a visual basics or a csharp coder](#)

Zoomers - February 5, 2019, 6:56 pm

Hey man, im looking for a simple application that can help me create accounts on robinhood.com using a my referral code link. And than create an account from there. All of the input needed values will be loaded into a textdocument. Basically it will access this refferal link <https://share.robinhood.com/tylerh2149> than it will click Get your free stock than input everything needed which will be provided in a textdocument and then click continue and do everthing until it signs up and wait for email confirmation and than it will grab the email confirmation link from a temporary email service.

(visual Basics)

Able to input proxies and use them on the webBrowser
Import textfile that includes all the needed input

Steps.

- 1.Goes to refferal link
- 2.Clicks on Get your free stock
- 3.Input values from the text document
4. Get email verification link from a temp mail system

Lmk if you have any questions simple program.

If you're paying, go to marketplace.
