Thread: [Private RDP Exploit + Autopilot Software 50+ RDPs/day | Vouched | Only for 250\\$](#)

benman - February 6, 2019, 4:39 pm

I decided to sell my Private RDP Exploit + Autopilot Software, I use it everytime for my purposes (I'm RDP's Provider also) includes private scanner which finds ip addresses by country and ISP octets. Just with seconds you get tons of open port ip addresses easily. Discovered ip addresses will save and output on .txt format and synchronize in software.

I gurantee you will get more than 50 RDP's in 24 hour. Easy Guide the software itself does everything, but I'll teach and setup you step by step.

A few months ago I provided another RDP method which was for that time best and now I have more modified automatized private RDP expoit

Setup time: 15-20 minutes

Most importantly thing is that all RDP's are unique, all of them have huge specifications best for mining

screen testing mining Hashrate with one of obtained RDP

No one has ever seen this method here so its unique, so this doesn't use any stickykeys/eternalblue or any public tool.

Im not offering any vouch copies, if you dont trust me then dont buy it, I'm trusted person here because I also provider RDP's packages and have too many customers

Price: 250\$

Payment method: BTC,ETH,XRP and other valuable crypto currencies.

Contact info: [PM](#) or Jabber: benman@jabbim.sk

I'm one of the old RDP's provider on HF and here my vouches

This isn't really private at all, you even used the image from thehackernews...

This blog gives you a better run down of what happened and how this works

If you are willing to make a contract and a trusted MM (on my expenses) holds the money to prove this is not Sticky Keys count with me to buy this!
