Thread: [JAVAFX Installation](#)

OBAMASELF - February 7, 2019, 10:48 am

Can any brothers tell me how to install JavaFX on Mac High Sierra?

P.s I have been searching up online how to install it but all of them are for windows.

I cant tell you how to install it on Mac, but I can tell you how I installed it on Linux. It might help you a little.

After reading documentation on <https://openjfx.io/>, it led me to download link:
<https://gluonhq.com/products/javafx/>

I simply downloaded jfx sdk and extracted it to my workspace.

Thanks brother, didn't realised the JAVAFX was separated from JAVA SDK 11.
