Thread: [Greenbar SSL - How helpful can it be in ecommerce?](#)

James Burnham - February 7, 2019, 11:30 pm

There is a lot of talk about trustworthiness in ecommerce. Devs code some weird trustbadge plugins and then charge extra for their premium features. A lot of buyers find them scammy though and they get more reluctant. What if an ecommerce site owner instead of messing around with plugins, just got a greenbar SSL though? What results could he expect in the long run? Do you have any personal experience with greenbar SSL?

Dark - February 7, 2019, 11:33 pm

You are probably better off with standard SSL.

Mobile devices can't depict the difference and the average desktop user believes any website with the green lock is safer than one without it.

Thanks, I didn't know mobile browsers show them as normal padlocks.

Can't say for sure on Android but on iOS that is the case.
