Thread: [Buy gaming monitor to replace my current monitor](#)

lol - February 8, 2019, 7:41 am

Will I regret if I buy 27inch 2560x1440 165hz to replace my current monitor - Samsung ultra wide curved monitor 60hz 3440x1440? At the moment, my graphic card is 1080.

Only asking cos of the monitor screen from 34inch ultra wide curved to 27inch but 165hz is actually pretty impressive! (from 60hz to 165hz)

We have no way of answering a question based strictly on your own personal preferences. Personally I'd just get another monitor and not downsize.

I bought this monitor for gaming after using 60Hz monitors:

<https://www.amazon.com/Dell-Monitor-S2417DG-24-Inch-Response/dp/B01IOO4SGK>

So much better with the higher refresh rate.

What's up mate...

When it comes to buying monitor there are a lot of things you have to consider such as refresh rates, pixel response times, contrast ratios, color gamut, etc. From what you've mentioned your old monitor (3440x1440) would be better for online competitive games such as WoW while the one you are looking to buy might be better for new games that have high requirements. While browsing in the net for a solution(for my monitor) I stumbled on this [article](#), it really helped when I was buying my monitor.

This thread is old. I bought Acer Predator X34P.

Thanks anyway! :)
