Thread: [Inject Adsense Dynamically](#)

Wilkyfreeflow - February 8, 2019, 6:18 pm

Hello everyone,

First off, its my first time posting here, so I apologize if I break any forum rules.

Now, I am trying to make an injector to append Adsense units into any website using javascript. My idea was to have a chrome extension that runs at document_start, and append Adsense with this code:

```
Code function injectTortugaAds (pubID, adSlot)
{
    var actualCode = '(adsbygoogle = window.adsbygoogle || []).push({google_ad_client: "ca-pub-' +
pubID + '", enable_page_level_ads: true});';
    var script = document.createElement('script');
    script.textContent = actualCode;
    (document.head || document.documentElement).appendChild(script);

    //-----

    var externalScript = document.createElement("script");
    externalScript.type = "text/javascript";
    externalScript.setAttribute('async', 'async');
    externalScript.src = "//pagead2.googlesyndication.com/pagead/js/adsbygoogle.js";
    document.getElementsByTagName('body')[0].appendChild(externalScript);

    var ins = document.createElement("ins");
    ins.setAttribute('class', 'adsbygoogle');
    ins.setAttribute('style', 'display:block;');/*add other styles if required*/
    ins.setAttribute('data-ad-client', 'ca-pub-' + pubID);
    ins.setAttribute('data-ad-slot', adSlot);
    ins.setAttribute('data-ad-format', 'auto');
    document.getElementsByTagName('body')[0].appendChild(ins);

    var inlineScript = document.createElement("script");
    inlineScript.type = "text/javascript";
    inlineScript.text = '(adsbygoogle = window.adsbygoogle || []).push({)';
    document.getElementsByTagName('body')[0].appendChild(inlineScript);
    //-----
    [].forEach.call(document.querySelectorAll('.adsbygoogle'), function () {
        (adsbygoogle = window.adsbygoogle || []).push({);
    });
};
```

}Either way, it doesn't work. Do you have any ideas on how to inject Adsense? Or is this a fool's errand?

Thank you for any help!

Note: I am aware this is against AdSense ToS. I do not intend to misuse this code :)

I think your AdSense account (as a monetizer) is locked to one domain as you have to specify that on account creation;
