Thread: [Cutting audio for an entire web based service.](#)

Mr. Robot - February 9, 2019, 7:36 am

I was thinking - I like how some channels on youtube make songs from politicians and crap, I thought what if I go through and cut word for word out of speeches by Trump and then put them all in a website.

Then people can type in a sentence and it will link those together (as long as they are in the DB, like he's said them before)

(Feb 9, 2019 08:43 AM)James! Wrote: [\[CITE\]](#) That's actually a pretty good idea, to be honest - I can see the use case. Would be good to make a mobile app to go with it.

I think even the possibility of adding a system to let them create the audio they want then adjust pitch on words to help them flow too could be interesting.

Mix - February 9, 2019, 7:47 am

You would need thousands of audio files for this and itt could take months to get them all but its a good idea none the less

Nah extracting words from videos is pretty easy now with speech recognition/auto subtitling.

If its just one person doing it it surly will still take forever tho

To get a decent sized vocab setup - maybe. I mean his state of the union just recently was 5540 words. A good portion of which will be duplicates.

Well I guess but its still something that could completely fail

Mercury - February 9, 2019, 7:54 am

I thought we were creating that app? I've already sold all my useless worldly possessions. House is foreclosing Tuesday.

-Sent from a shack in Cambodia

Doughboi - February 9, 2019, 9:41 am

pretty sure this has already been done tbh

Vitani - February 9, 2019, 9:44 am

It would be very cool to see something like this. Looking forward to see it if you actually end up making it!

Or use an open api that can mimic someones voice by learning from them talking.

You could also let users submit clips.
