Thread: [stopping redirect in man in the middle?](#)

FrankMurphy31 - February 13, 2019, 9:58 pm

I recently have been messing around with Man in the Middle attacks and decided to play around with dspl0it on my Android. One of the options is to redirect all http traffic to a specified website. So I chose to redirect all traffic on my laptop to go to some cheesy porn site. My question is.... even after disconnecting my phone from the network and stopping the attack, my laptop was still being redirected to the porn site. I assume I have to reconfigure network settings to stop it from redirecting right?

Have you tried rebooting your laptop, router, and phone?

FrankMurphy31 - February 14, 2019, 12:39 am

No I didn't reboot it. I'll do that though. I thought mabey I had to manually reconfigure the SSID and network for it to stop redirecting mabey. Thanks though.

Might've been cached! Just reset your router
