Thread: [CSGO Cheating on main system](#)

???????????? - February 14, 2019, 6:57 am

So just got a internal legit from a mate and using it on other accounts, never toggled on my main account. But do i have to clear registry or format something to be really sure that my main will never get banned? Or is just not executing the program enough?

That reminds me to a story of a friend who got banned using a cheat in offline mode against bots, i think the support meant to him that he should have used in in some mode or delete smtn...

Thanks for help

Don't inject on the others and ur fine

Arefas - February 14, 2019, 8:15 am

Make sure you didn't connect with steam guard.

no need to do this, doesn't do a thing.

just dont link steam guard or inject on main and ez

As long has the cheat doesn't have a client process or driver, not injecting and not sharing phone number is all that is needed.

Was fun back in the day when Chod got huge amounts of people insta banned as the driver was always running.

ur fine, but your trust factor will go down if you care about that.

edit: you don't need to clean the registry or w.e. Just don't inject it on any account you care about and you're fine.

Also, make sure your number is connected to any of the accounts you inject on as they could lead to a ban on your main/other accs you have that number on.
