Thread: [Best Crypter as of 2019](#)

raghavsood999 - February 14, 2019, 5:26 pm

Hey I am looking for a lifetime crypter which is native and needs no dependancies, has UAC bypass, melt option, usb spread using .ink method option, persistence option but the process must be disabled in task manager, it doesn't have to have hokey hidden or regkey hidden but what the fuk is the point of a crypter then?

It must have option for eof, file bind for multiple files, silent run, visible run or bind only , multi file downloader , silent run, visible run, download only, to specific location, rename process, inject to process or itself or native or vbc .

I need it to have basic crypter function like ups, melt, usb spread using new ink method, file binder, persistabce, eof,

It must be long time fud, output file must be native.

Also must be fud and must offer private stubs which are under \$40.00 usd

Also crypter must not be priced over 50.00 usd.

Cyber Coder - February 14, 2019, 11:38 pm

oh so you want all those features with 40\$ private stub? whatever you smoke, i want some too

Mercury - February 15, 2019, 12:49 am

Those times are long gone pal. It takes alot more effort to produce something FUD these days. You'll notice the cryptography section isn't flooded with cheap to free crypters, like it used to be.

Support someone like Cyber Coder or No\$feratu and spend some money. You'll get a really great product. These guys invest time and effort into what they do.

Which rat or file do you plan on crypting with

For me, yakuze crypter is the best.
