Thread: [\(HELP\)Include not loading since added a function](#)

CryptoLayer - February 19, 2019, 5:48 am

Hello since I added this function to my code

the include does not load properly .

this normally shows up. when page is loaded : <http://prntscr.com/mn6uuu>

I need to presse "submit" for it to load . before was loading normally without to "submit"

<http://prntscr.com/mn6vid>

my entire code [code](#)

Hello,

pleas format your code and split up the display part from the logical part.

This mess is not readable at all.

Your problem lies somewhere at the post variables or that you set somethign to your session when you load the page -> so it will only affect the page at the second time.

Check these Solutions and you should find the bug.

Or you format the code and split up the logic and i will take a look at it.

I sent you a PM regarding this. Since we speak the same language, it'll be easier to communicate ;)

Btw, `ereg_replace` is deprecated since PHP7.0
