Thread: [Shell Script Gzip](#)

Z0Ra - February 20, 2019, 11:16 am

Can anyone help me out with an assignment that involves compressing files using gzip? Done on bash. Message me or post below please.

```
Code rem Pick up each file in C:\Temp1\ with .out extension.
for %%a in ("C:\temp1\*.out") do (

    rem Compress the file to a file with the same name but .gz extension is added.
    gzip -c %%a > %%a.gz

    rem Delete the .out file which has been already compressed.
    del /F /Q %%a
)I don't know if this helped that much or not but I hope it did ?
```

Legit 2 seconds after this I saw you wanted bash not batch so i can't really help in that sense since I'm a noob when it comes to bash but found something that might help [here](#)
