Thread: [\[Source\]\[Release\] Lan Chat \[VB6\]\[No \\$hitCa\\$h/Adf.Ly/L!nk Buck\\$\]](#)

kbhawkman - August 6, 2010, 3:58 pm

Hello Hackforums

This is my Lan Chat Release, this is my first vb6 program that uses Windows Forms so go easy on me, I tried to make the GUI look nice. For some reason Avira on my PC detected it as a virus when I was creating the executable.

If anyone can tell me why that would be good. Anyway it is a source so no need for a virus scan but here is a link anyway:

[Virus Total Scan](#)

I tried my best to put "Anti-Leech" in the code to stop people from leeching.

If you are a good coder you can make a tool to remove the "Anti-Leech".

You will understand what I mean when you look at the source.

Anyway this is what it looks like:

Credits to original coder?

I have seen something like this before.

I have seen something like this before.

I based it off of a YouTube tutorial and then completely re-coded it. The only thing the same was the name of text box's and button.

Also, does anyone know why Avira Detects this?
