Thread: [I WANNA BUY JPG EXPLOIT or HIDE PAYLOAD IN IMAGE](#)

jpegexploits - February 22, 2019, 12:34 am

hi guys

i stole my 550\$ yesterday by hack-tools.net

I must have jpg exploit OR hide payload in image exploit.

please. help me

how can i buy it?

SIM-4018496 - February 22, 2019, 12:48 am

chill man, also just try to re-phraze your sentences

help me
private message plz

Joklol - February 22, 2019, 9:14 am

I saw someone in here selling it for like 200 dollar. Don know if its legit but anyway

CyberStrike - February 22, 2019, 9:17 am

Just advice, always make sure it's working have someone demonstrate it live.. also inspect to see what's going on like say they don't have some process that is waiting for a jpg to open then it runs something so it looks like it's REALLY doing something.

BULL SHIT

@OP, you cant load a binary payload in an image....

Even if you COULD, you wont find it here, and you wont be able to afford the price....

V3xD - February 22, 2019, 1:25 pm

The only way to have your payload in a .jpg image, .txt file, or anything other than a application

extension is to have the file .jpg or whatever and have a shortcut file that accesses it.

This trick has been posted 10000 times on here and is %100 free.

Razor Crypet - February 22, 2019, 1:31 pm

you can use armitage in kali linux dont giv monye :D

What.

That is nothing but a GUI for metasploit has nothing to do with the thread lol

First you make your file that you want to be ran whichever extension you want it to be, then you also have a shortcut file in the same directory as it. Lets say the first file is server.jpg, make a shortcut and put it in the same folder and lets say that file is mypicture.jpg.lmk (lmk is a shortcut file extension), right click on the shortcut and goto properties now where it says target put "cmd.exe /c server.jpg". Now when the shortcut (mypicture.jpg.lmk) is ran it will run server.jpg as an EXE extension aslong as it is within the same folder. At this point in the shortcuts properties you can change the icon and such to make it a bit more disguised- heres a tip when you are changing the shortcut extensions icon click browse and put C:\Windows\System32\shell32.dll to select from a wide rage of default windows icons.

gianni - February 24, 2019, 10:58 am

Why are there so many retarded third worlders in this thread and why do they all suggest things that are idiotic?

Superb idea, thats actually a smart way for someone to fool you into thinking that it works, always loved your insights dude, especially stuff on system prepping :)

Thanks, I don't like to think the worst of people but you know it happens.

drexel - February 24, 2019, 2:39 pm

Maybe this is an option ?

silenteye.v1kings.io/

Or code in exifdata?

You will never find exploit exe jpeg even if theres somebody who actually has it will 1 not sell haha and 550\$ for such exploit is way to low you should add 2 zero's :P

heybrotex - February 25, 2019, 9:35 am

There is a lot of tutorials out there for this.

CRYPTOGATE - May 18, 2020, 12:08 am

dont be scammed...there is no such real exploit for sale...otherwise contact me...
