hello
thank you for you attention
i have an error with ollydbg :Don't know how to step because memory at address 0012EA9C is not readable.

Try to change EIP or pass exeption to program HOW can i fix it ?
it occoured when i was debugging by f7 in ollydbg and when i got to a unknow command that command was : LOCK JMP FAR 7E42:8EA00012 whats mean that code ? and how can i fix these problems i wanted to attache a screen shot of my ollydbg but there was limitation more than 50 post so i could not

pleas guid me... thanks

upload screen shots to sendspace.com or somewhere.

Better yet, go find lena tutorials and learn from them ,then return to your cracking project.

Do you know what stack is ? Follow the addresses there ,and check out the call chain. GO back before you get to the exception.

Maybe your target is unpacked/decrypted badly or jmps to bad code after some condition is met (like bad boy).

GO FIND LENA TUTORIALS AND STUDY THEM!

DO NOT PM me ,I can not help you.

Learn assembly. Stop making a new thread for every instruction.... This is dumb.
