Thread: [POS Desinger](#)

itcorp - February 23, 2019, 6:27 am

Since I do not have experience in this field I need a reference to some good example which does not require too much reconstruction of existing applications. I have visual elements of the coffee shop which can be displayed in the cafe shop element designer as well as on the floor plan itself. What I want to integrate is next, I want to be able to resize cafe shop element together with all supporting elements proportionally in the designer and on the floor plan of cafe shop as shown in the picture below.

What I have:

Floor plan of cafe shop

Element desinger

A short animation of current desinger to see how it works now but I would just like to do it with a mouse

Wow, your very good at what you do, when I read the title and saw the images I thought I had an idea, but as I read I became more and more lost.

I have seen this before tho, you might wanna look at game making forums, I have seen some similar posts in the 2D sections, even if it doesn't answer all your questions, I'm sure you could gain some ideas of cool things to add.

Sorry I couldn't help, that is complicated, but you seem very skilled and I'm sure you will have it worked out soon!

:D

Would taking an image of the final product and then resizing the image be suitable, or do you still need to be able to interact with elements after the resize?

Wrote: [\[CITE\]](#) Would taking an image of the final product and then resizing the image be suitable, or do you still need to be able to interact with elements after the resize? Interaction with elements exists all the time even after resize if it meets the

requirement for that.I found some references for what I want to achieve so I'll see where it will take me it's not that simple.

Thanks guys for replys
