Thread: [T4L3N7 CTF - Insignificant | Prize: 1000 Bytes | Only one winner](#)

Nick (Name) - February 24, 2019, 11:20 pm

Alright guys, here's another stenography challenge it's not easy at all, and will be quite challenging to some. Who ever completes the challenge can post a write-up on how to do the challenge if you'd like, but there can only be one winner that acquires the bytes. Once you have completed the challenge please send me a PM and I'll validate the flag you've found. Once a member finds the flag the post will be closed, so keep that in mind so you're not PMing me for a closed contest. Good luck and have fun!

Prize: 1000 Bytes

Challenge: <https://media.nick-name.net/ctf/insignificant.zip>

Default Archive Password: nickname

Flag Format: NICK{s0m3t3xt}

I played with it for a couple of hours yesterday. Don't have any experience with steganography and image forensics but this CTF got me really interested to it. Haven't managed to get any good info though. Will give it another shot today. If nothing comes up, I'd really like to learn how to solve it after it's completed!

Abruptum - February 28, 2019, 10:34 am

This Challenge is really cool, i tried various things and i think i have found the position where the data is embedded but i can't get the data out of it ;D

SORRIE - February 28, 2019, 10:40 am

I thought linking to a direct download was against HF policy, i thought it was a website I don't want random files on my PC

If you want to go to my website then go to the main page. It's not against the rules to directly link downloads on HF.

Whoever solves this, please post a write-up. This got me busy for some days now. Found something but not sure what it is or how to use it, don't know even if it's useful ?
