Thread: [\[Blind SQL injection\] Help](#)

SERPENT@ - February 27, 2019, 1:31 am

Hello guy's.. In the below HTTP request it said parameter: administration_id , was vulnerable..
Anyone can help me to inject it?

For inject it, you need to register and logged-in to view this content.

I have tryed with SQLMAP, but not working..

PHP Code

<?php

GET /product_updates?administration_id=237891964997994205 HTTP/1.1

User-Agent: Mozilla/5.0 (Windows NT 6.1; WOW64; Trident/7.0; rv:11.0) like Gecko

Referer: https://moneybird.com/237891964997994205

Cookie: _mb_session=

Sitrep - February 28, 2019, 5:12 am

"administration_id" are a part of moneybird as an API and "237891964997994205" are your authentication token. Just some information that I found out, if it helps anything. I'm not sure if or how you can Sqli an API like that, but maybe someone with more knowledge have a good answer.
