the sniper prediction works (perfectly actually)

The aimbot is a little customizable which is good (and works as intended as well)

Currently the only esp option is box esp and that works fine as well

I received the cheat before it was updated with the ESP distance filter, tracers, NoSway, NoRecoil and NoSpread.

At the time, I had the cheat with only the Aimbot and the ESP.

Both worked great. ESP is box mode, which I'm perfectly fine with.

Messing around with the aimbot, I felt like the bone setting of 6 was too inconsistent (obviously would be inconsistent for only headshots), but setting it to around 7-7.5 made the shots a lot more consistent.

Strafing with A and D made the aimbot inconsistent; however, I'm positive that Foliage fixed this with his new update.

I did not receive a ban and tried this on two accounts with two computers.

Is this like the other cheats where you get banned in like 24 hours? Or whats the word with the ban rate?

Isn't Anti Ezcheat like 3 strikes and you're out. What do you have in place to stop this?

Also I'd love to test this before trying if you don't mind.

No bans to date. Can't predict the future.

Not sure what EAC bans are like, but I suspect it's more like "one strike, you're out." Why would they allow known cheaters to play again? That'd just be a shit AC.

PM me for demo.

Is it fully undetectable and can I turn it on and off?

I mean it is necessary for me not to get banned if I play safely. So I need a guarantee that it stays undetectable.

Fully UD and no history of detection at all. Sure, you can turn it on and off. There's a menu - though, in all honesty - it's a bit difficult to use. Definitely hard to interact with if you're in a firefight.

But if you can afford to pause somewhere for 4-5 seconds, you can change options.

I confidently condemn anyone who "guarantees" something will stay undetected as a scammer, a liar, and a bad situation waiting to happen.

All I can tell you is the detection history (none). It's up to you to figure out the likelihood of a

detection. I think it's low, but I won't guarantee anything I can't control.

**darkbak** - March 5, 2019, 6:58 pm

Aimbot looks very good :) good luck with sales

**Pandaman** - March 5, 2019, 7:36 pm

I've been using this for just over 2 days.

It's very easy to set up and use and I haven't noticed a hit to my games performance

No detections, ESP and aimbot is working good.

You can adjust between rage or legit settings

and above all Foliage gives help when needed if you are having any issue

Hello there! Can you please PM me your discord handle so I can move forward with a purchase? Thanks in advanced!

**SadlyNo** - March 7, 2019, 9:18 am

Can say with video evidence and etc that this cheat is of the lowest quality atm compared to other slotted and non-slotted.

I used it and gave some people trials for it (I was a reseller read at the end for more info) and the cheat is unbearable for the price. The aimbot is unpredictable as sometimes it will not shoot at the right spot even when an enemy is right in front of you, and thats when I used the "rage" settings that Foliage recommended.

Also to navigate through the menu you must tab out to a different task or press windows key and use arrow keys to slowly navigate through it all (Sometimes the arrow keys dont respond idk why). So have fun editing mid game.

ESP is fine TBH, but idk how you can fuck up on that.

Now to the drama. I was not gonna say my review since he was unhappy with me and I wanted to leave him alone but now he's chasing my threads...

Whats our drama? I tried selling his cheat but failed due to reasons above (I make around \$300-\$400 a week reselling so I have the customer base and I can provide proof for that) and since I failed he did not want me to resell for him anymore. In a desperate attempt when he increases the price by \$10 I undersold him to people by \$20 since my rate was \$70. He did not like that and in hindsight, it was a rude act on my part. I should apologize for that but he is very arrogant and persistent, good luck with him guys.

Many there are more cheats even the non slotted ones that are full UD that work 100% better and for 1/5 of the price.

This is not a sales thrash its the truth, go buy Zenith (\$15 a week or \$45 a month) or others and tell me this is better (PROVIDE PROOF OR I WILL IGNORE)

P.S this cheat has potential just need much more work.

PM me with request to specific proof

(Mar 7, 2019 10:18 AM)SadlyNo Wrote: [\[CITE\]](#) -snip-

If you'll view this user's warning level, you'll see the thread I posted on.

You were looking for an Apex cheat's source code, and you mentioned you had several already cheats purchased; you would be willing to send one or more of these to an aspiring cracker in exchange for the nulled code.

That is the reason I replied to that thread. "chasing my threads" my ass, maybe it could be seen as that if you posted somewhere else and I specifically went to find your thread, but I'm primarily a HF user and you posted in the Marketplace Discussions subforum. I was just lurking when I saw a thread related to Apex, and since I sell an Apex cheat I was naturally gravitated towards it. I didn't even know/remember the user was you.

Not only did you undersell - doing this would've been fine by me, normally - you undersold to the users already in my Discord channel. Not new leads, like if you had gone out and done your own advertising, but leads already in the Discord. I wouldn't have minded if you'd sold at \$70 to someone not already reached, but you were DMing members in my server, some of which came then came to me very confused, asking if you were legit or not.

Thanks for the review, but we've updated the aimbot since March 6, and I don't think you got to try the optimized update. It functioned fine before that at mid-range, but I do agree with you it had problems tracking at close range that basically made shotguns unusable. New update should help with improving long-range accuracy, basically decreases the intervals between when the aimbot "moves" your mouse, with the overall result being it's way less jumpy.

I think Zenith is a suitable alternative if you don't want the security slots provide, and they've been detected in the last three weeks. I can't speak as to the quality, I've never tried it. Looks promising.

Updated cheat's overlay security.

Also updated the aimbot, should now lock on to a target and

1. not switch targets (from recoil, or something)
2. track target if it moves out of FOV

This improves close-range firefight performance. As always, contact to buy.

Bought the cheat today. Been using for about 12 hours now. I gotta say, there's really no downsides about the cheat besides the fact that you have to tab out to change the settings. Aimbot is a little iffy when moving but works 99% of the time. ESP is great, can't really fuck up on that. Had multiple 2k dmg games along with a 20 bomb using this. Gonna try using it in some random online tourneys now :)

Would I recommend this? Yes. For \$80 a month and being slotted, it's worth it imo.

Cheat is working perfectly!!!!

Aimbot is a bit sluggish with certain weapons but overall very good with semi-auto guns

ESP works just like any other, giving precise distance readings and along with other options

I have not tried the no-spread cheat and I don't plan on it

Just don't use the aimbot for everything, use it to help in a tight situation because remember, there are spectators
