The Design isn't all that great. Then, why would I go to your site for it when there's:
<https://www.animenewsnetwork.com/> ?

Update yuzo-related-post:

<https://issekai.com/wp-content/plugins/yuzo-related-post/readme.txt> shows version as 5.12.80, latest is 5.12.89.

Advise, use Cloudflare for your DNS.

Limit access to xmlrpc.php, I ran

https://gist.github.com/ethicalhack3r/60a3ea6d7c86c7ace891/raw/35766bf069091044c601925eb951300c1a0266d5/wp_dos.py as a test, and your site went down like a tonne of bricks.

Design wise, love it!
