Thread: [Eternal blue](#)

roosiinfidel09 - February 28, 2019, 5:05 am

Is there an Nmap command to search for eternalblue vulnerable systems? Or any other way to search for systems that are vulnerable. I tried shodan. I search for win7 enterprise. 99% of systems posted there are down.

valetta - February 28, 2019, 5:29 am

yeah there's an nmap .nse script that checks for it.

you can do

```
nmap -Pn -p (targeted port) --script SMB*.nse $Target
```

I don't remember the exact script name.

smb-vuln-ms17-010

WannaCry spanked many of the un-patched servers.

That's it! the good ol ms17-010 LOL, man it's surprising how many organizations still don't have this patched.

The port has to be 445 isn't it?

Yeah, 139,445

Titit - April 7, 2019, 12:55 pm

It's built in script .. Just use or create new scan profile and pick them on scripting tab (if you use gui)
