Thread: [My computer wont boot into normal desktop anymore](#)

Tator99 - March 4, 2019, 9:05 pm

My pc died the other day and when I charged it and turned it back on it won't boot into my normal desktop with all my apps. It boots into the windows 10 menu like when you click the windows icon and I can't go to my regular desktop and use my computer normally. I'll pay \$10 if someone can help me fix this. Add me on skype Andersontaylor473@gmail.com if you can help!

That menu is referred as "metro." The menu everyone hated in Windows 8... It sounds like you're running Windows 10 in tablet mode.

Adjust the following:

Settings > System > tablet mode (left pane) > when i sign in "desktop mode"

Settings > Personalization > Start (left pane) > Turn off "Use start full screen"
