This has a DP so Gsync should work if you are running a 1070 with a driver newer than 417.17 . You would just need to buy a DP cable as well.

Probs best 144hz 1080p monitor at the moment.

This has good specs but I don't think I would get a Dell Brand monitor.

From my side , we mainly do Dell monitors and locally for us at least Dell is by far the best price to performance brand available. I can imagine pricing is different in other places.

I mean if you dont want to go Dell I can also recommend any monitor really with Freesync and a display port.

Did you have a bad experience with Dell ?
