I have the same problem when trying to browse with WiFi on.

Both on my laptop and my phone. But as soon as I turn WiFi off and use my mobile connection I can enter no problem.

Wonder if OP has vpn.

HF has been intermittent recently, most likely due to a wave of attacks on the servers hosting the board.

Yeah earlier today or last night I was getting serious lag. Not sure if it was the site or me.

It was the site. Several users mentioned it to m off-site. I didn't start to experience issues until this morning.

Ah god damn skids doing ddos attacks probably. It seems faster now..

I had the same issue last night. Somehow my home IP was being blocked, but at the same time the site was experiencing some lag. I was only able to get on from my phone service. It's fine for me now though.

Not solved yet, thanks for your concern.
Doesn't seem to be my IP as my phone is connected to the Wifi. Just cant access the site via my laptop.

Any resolutions?

Not sure if its relevant, but do you have IPV4 OR IPV6 address?

A few hours after our chat I began to experience issues, now it's fine. Earlier today it was not.

Weird though because I didn't see any 403 errors just lag.

PM me the IP. Likely firewalled.

GiraffeBear - March 7, 2019, 9:25 pm

Try and clear your cache, etc. and try browsing again? Never got the error.

If he's using the same wifi on his phone as his laptop though?

Its possible his phones data helped with the connection or maybe a vpn. Not sure if its possible they were on other IP's still dunno.

Then he obviously wouldn't be able to access Hf.....
