Thread: [bulk email sender python \(need\)](#)

freddy00 - March 7, 2019, 4:20 pm

Anybody have python bulk email sender script with reply-to function and emails in txt file. Please help anybody that can code contact me for deal

Nachfolger - March 7, 2019, 4:25 pm

Are you paying for a developer to do this? If so, please use the Marketplace, not this forum. If you're NOT paying for this, promptly let me know so that I may neg you.

No am not paying I just need help on it

nicodxmus - March 8, 2019, 11:08 am

Google Cloud has a good mail API for everything you want to do with emails, you should look for it. Option with sending emails from txt file is really simple. You just need to open this file in python and put content in variable.

demarco - May 17, 2019, 8:17 pm

Do the emails have to be of a specific domain? I know ways to do it from emails that are like "johncena@afoinfo2n3rlk.com".

Your comment just made me laugh, I was actually about to write the guy then I saw he wasn't paying.

I like your attitude. ?

scrubjay - May 22, 2019, 3:26 pm

You can use smtplib for this. Very simple imo

<https://docs.python.org/2/library/smtplib.html>

Goodies - May 24, 2019, 5:02 pm

You should more worry about the service you're using as an SMTP relay because many email providers will only allow a limited amount per day. It's not a super small amount but usually 100-200 or so.

Sending the emails can be found in a million tutorials.
