Thread: [Looking for Help with Icloud backup to PC/ recovery](#)

Madmike399 - *March 10, 2019, 12:36 am*

I have access to icloud but no device. I have tried using several of the trial versions of icloud backup to pc programs like Dr.Fone, IMyPhone, Fonelab ect. each of the trial versions online each pull up different data some more some less but i dont have access to some of the things i need nor am i able to save or recover using trials. I am looking to pull all messages (whatsapp, iMessage, messenger ect), message attachments, voicemails, deleted messages basically everything that has to do with social interactions. Does anyone have this capability or have a means to do so without having to purchase a program that might not give me everything that's currently in the icloud backup ?

Compensation can be discussed.

Hey, my company does this type of software, but currently every company in this industry is failing to log into icloud accounts due to increase 2FA security from Apple.

Whats your interest in this software? i am looking for good reverse engineer and hacking to tr and fix this icloud access issue.....can you help .?

Regards,
Lee
