Thread: [My port is open but canyouseeme.org is saying it isnt.](#)

OC722b - March 14, 2019, 10:29 am

I'm using nanocore and are using the port 1604. I forwarded it in my router TCP/UDP but port checking tools still say that its closed.

Anyone know why?

Stop using nanocore for christ sake.

Have the port listening when you check and firewall off.

OC722b - March 14, 2019, 10:31 am

It is listening and still nothing

NYANxCAT - March 14, 2019, 10:55 am

Try this

<https://hackforums.net/showthread.php?tid=5916411>

Malicious - March 14, 2019, 11:06 am

Hmu if you still need help with listening on ports.

I can make you a simple python program that makes ur port be open 24/7

Literally anything else that isn't outdated, like Orcus.

Orcus is amazing and practically unexploitable

naxster - March 14, 2019, 11:42 am

Why do people still use Nanocore? And how do they even get that RAT since it's dead and outdated? -.-

Most of them is backdoored...
Use Orcus or even njrat!

OC722b - March 14, 2019, 11:55 am

I will try Orcus thanks. Also, cyberseal is still a good crypter right?

It's meh but should get the job done yeh

Alles auf Rot - March 15, 2019, 3:21 pm

Start the Port Listening on your RAT before going to canyouseeme.org. Also make sure your damn firewall is turned off & your AV is disabled/uninstalled/destroyed

K4ax - March 20, 2019, 9:54 am

Did you start the listener ? If you didn't start the listener, canyouseeme will tell you that your port is not open...

anonymous420 - March 21, 2019, 8:55 am

same here.my port is open but canyouseeme says port is closed

cacaa123 - March 21, 2019, 8:58 am

you need to have something listening on that port, it's not enough to forward it...

SioVer2 - March 31, 2019, 3:32 am

Try listening with a tool and disabling firewall. If that doesn't work make an exception in your firewall.
?

Fisher - March 31, 2019, 2:43 pm

If canyouseeme.com can't see your port that means is not open !!!!!!!

Because this site is sending request into your specified port and if its can't reach then no one can reach either. [includes and bots]
