Thread: [Best Cloud Mining Website](#)

raghavsood999 - March 14, 2019, 5:12 pm

I am looking for a cloud mining website. I know how cloud mining works. Instead of using a physical computer, i can use a series of computers located on a cloud network which allows me to mine crypto-currency. I know what hash power is. It's the mining speed or calculations per second to mine the bitcoin thing. Well not 1 bitcoin ofcourse but .00011 btc or something.

I only want to mine btc and not anything else because i am used to bitcoin more. I have a block chain wallet and i dont like changing wallets. I want to enter my wallet address to my cloud mining website and then when i mine every day i want to earn around \$500. How do i do that. Is that even possible?

Even if i get \$50 a day its ok because i understand its a cloud mining protocol and not standard individual pc that a single user uses. Many users use the pc's on the cloud and not only me so obviously no hash power is going to let me have \$100 a day correct?

Even \$10 is okay but how and which website to use? I dont like slush pool because it looks too messy. I need a nice button on the website to start mining like COIN HIVE allows you to select your cpu cores and threads then hit the mine button. On miner gate, i need that feature but i have to download the app. I dont like download 3rd party apps. I want everything on website. However if app is needed then i dont mind.
