Thread: [Botnet/RAT pack with support for beginners.](#)

Leo422 - March 20, 2019, 1:34 am

This pack comes with over 30 RATs/botnets/crypters/admin tools/tutorials/added goodies. I'm new on this forum but a long time alphabet and dreammarket vendor. If you buy the pack and explain what you are trying to do I will customize your order and I am always willing to give advice to beginners or anyone who has questions. Price is 10\$ Any preferred payment within reason. All programs are full programs and working. Will train in windows os or linux. That's it, simple post I know, but trust me it's worth 10\$. ????

I'm not trash talking but it sounds like you found these off a forum bundled them up and now selling. How do we even know the programs aren't Trojaned?

Leo422 - March 21, 2019, 9:37 pm

How do we even know the programs aren't Trojaned?

I wouldn't just repack some botnets and rats. I bought these over time, scanned em individually and tested them one by one. I'm not trying to get rich with this post. Just spreading the love and getting established on this forum. If you get one that's Trojaned then I'll replace it or refund you. I respect the concern but I'm just checking out the new forum is all.

Can you send me screenshots through pm or skype please as this looks pretty empty and i would also like a description and what type of places you have these programs

Skype: drew17182

Leo422 - March 21, 2019, 11:49 pm

Sure. What would you like to see? Dont do Skype but will send screenshots or whatever else you need

Kagome - March 22, 2019, 5:20 am

You don't seem pretty sure that these aren't infected..... I'll pass

Noone can be sure these days Kagome. I respect the concern but I scan all my source files thoroughly and put them through viristotal if I feel there is a question. Thanks for looking tho. I've gotten more insight from the skepticism than I could have by selling anything. Must be alot of scammers on here. That sucks because I like the site.

Yes you can be sure... just sell your own products and not what you find randomly on sketchy sites.
GLWS

Well it seems like you have had a bad experience or two so I'm not going to take offense to your flaming. All I can tell you is that it gets better as you go and if you are lucky you will stumble across something major and none of this will matter si much anymore. I've been in this for 20+ years I've seen just about everything and can tell you that it will all pay off if you stay diligent. It can all come crashing down too, so make sure you protect yourself. Also you might try to give people the benefit of a doubt, at least until you check them out. Look up hidden lynx and if you dig deep enuf I might see you and say hello, then my friend you will never be concerned with simple Trojans again. This is my last post so i wish you well....remember its not about what you know it's about WHO you know.

Your posts are silly , if you really had any skills close to a "Hacker" you wouldn't be trying to sell public stuff for \$10 on a forum? You'd have thousands illegally , peace ?
