Thread: [Agile dot net. I am willing to pay.](#)

cobaltcrypt - March 24, 2019, 3:39 am

Hi everyone:

Does anyone here can handle agile dot net? I need a job properly done and I am willing to pay for it. Is whitehat stuff so don't worry.

(Mar 24, 2019 03:39 AM)cobaltcrypt Wrote: [\[CITE\]](#) Hi everyone:

I am a software developer. I used to work with a guy and this guy was trying to steal my thing. He registered the company on his name to pretend he was the owner. Therefore I kicked him. He is now selling similar software and I presume he somehow reversed it. Or maybe used my ex girlfriend to get sourcecode from some backup copy. I want to proof in court he stole it and need to reverse his stuff. to go to court, I have a binary. It is protected with agile dot net. I have that one too. Problem it is a bitch cause it encrypts the damwn code with native dll I think. And ilspy totally fails. There must be some way. Maybe dumping it? Any idea? Recommend someone who can help me? Give me a hint to reverse myself. Anything welcome. Regards.

I am disassembling the native dll to see what I find. Time to get back to IDA pro
Is it possible to PM me both the binaries or at least the protected one to have a look?

ManagedJiterFr4 doesn't works. Just got some folks trying it. Wanted to clarify that.

fryguy2 - March 29, 2019, 9:11 am

Don't know if this info would help you. I'm looking to get something done also.

Yes still the guys haven't being able to deal with it. Is latest version. I know some russians guys have clearly broken it. It uses native dll (it is packed with some sort of xor + add) that desencrypts in memory the actual il. Or that is what looks like.

fryguy2 - April 3, 2019, 7:34 pm

It's the .dll inside the zip file that has the protection.

Thanks

NanioBot - April 4, 2019, 2:56 pm

agiledotnet comes with another .dll cant deobfuscate without that, best to upload all files

fryguy2 - April 4, 2019, 7:20 pm

That file from the download link imports into a program called Ninja Trader. The file is directly from the supplier, nothing removed.

Heard some Russians were able to figure it out. Just don't know who or how.

Thx

fryguy2 - May 3, 2019, 8:49 am

User "zrcccc" said he could help. Sent files, never heard a thing back. Would avoid.

fryguy2 - June 28, 2019, 9:38 am

Any updates to this? Anyone able to figure anything out?

Thanks

indicators - February 19, 2020, 5:20 pm

contact me i can do it using some methods actually im working with several nt8 indies

AnonIran - April 21, 2020, 11:59 pm

you ca use SMDAGILE by code cracker /snd

egurenk - April 26, 2020, 1:49 am

I can't find anything on SMDAGILE by code cracker.

Fryguy2, did you solve it?

cobaltcrypt - January 10, 2022, 5:55 am

I found it here

<https://lamp-ret.club/r/categories/net-reverse.5/>

exetools does not let me download

cobaltcrypt - September 25, 2022, 5:50 pm

I turned to crack it open myself eventually. Used a tool I downloaded from github and fixed later. With that I dumped it, the rest was ILSpy since protection was not that heavy afterwards, not even control flow flattening. Fortunately I didn't took this to court since it turned out was a very similar replica and not pirated. It also proved my ex was not involved. Through heavy competition I directed this guy to go bankrupt. And that is in resume the story. Nothing special aside from big smoke to be

found in his stuff. Relatively happy ending. However proves how useful can be reverse engineering sometimes to know the truth.

Would you be willing to share the final process and changes you made? I am stuck at this last piece.

cobaltcrypt - April 12, 2023, 9:26 am

Unfortunately I can't since I am currently under the attack of some crackers with latest agile versions. I already passed secureteam some advices on how to increase security and they still don't have a solution. But currently all the protections can be reversed including VM with the right tools and knowing the right persons.
