Thread: [Will Virtual Reality become Reality?](#)

Pain - March 27, 2019, 10:20 am

I want to have a logical discussion with everyone regarding this topic, as many of you know Virtual Reality is being used more often these days and is fairly new, and different to any other technology we have today. Before getting into this discussion I urge everyone to watch the video below and then read what I have to say under it. ?

[Video: <https://www.youtube.com/watch?v=BGRY14znFxY>]

I was amazed when I watched the video, the possibility of living a different life from inside your home never ceased to amaze me. The only difficulty I would see would be showering and eating, however in the video the guy managed to fulfill those needs. In terms of physical activity, as you may have seen it is possible to remain fit using the VR system as you can workout with others and do other activities as well, such as yoga. The only time I would imagine you would actually have to take off the VR is when you need to restock on food, or shower. Can our reality become dreams? and our dreams become reality?

It may seem scary or shocking to many, this can actually become the daily life for someone.

It is also important to note technology is advancing day by day, the VR will only advance from here, more options could be added such as a actually new life. Surprised this hasn't been a black mirror episode, but what do you guys think about this. I am really hoping to read a lot of different opinions.

typhoid - March 27, 2019, 10:27 am

anime will be real life one day and we will all become magic girls.

DopplerAF - March 27, 2019, 10:33 am

It will become so real that we will get stuck in a artificial dream, just what madara uchicha wanted (Naruto reference)

Dope - March 27, 2019, 10:35 am

If you think about it, we're already kind of dipping our feet in it. I feel like in a few years you won't need people to actually work in factories, stores,...

Now that you mention it, it's kind of off topic when I think about it. But yeah.. it's a liiittle tiny bit of virtual reality still. Everything's gonna be controlled by somebody eventually. We're already "controlled" by banks. They see what we spend on, how much we spend, where we spend it,...

Yes, this will happen.

James Burnham - March 27, 2019, 11:01 am

Virtual reality headsets are just entertainment tools. A person can't make a living while entertaining himself. Maybe some privileged rich kids will have the ability to spend most of their time entertaining themselves, but these are just a minority.

Well that is the issue here, how much time do people usually spend on "entertainment tools", a majority of their time. This "tool" in particular provides a different lifestyle for a majority of people. Yes it is true they cannot make a living, but they can escape reality for sure.

No, most people spend the majority of their time studying, working or teaching their kids. Only some college students (with their parents tolerance) can manage to waste a whole day in pure entertainment, and even then they end up regretting it because they won't pass the exams.

mod - March 27, 2019, 11:45 am

virtual reality IS my reality, i rarely leave my helmet

duck - March 27, 2019, 11:56 am

Maybe in the next 30 years yes..

GettingRich - March 27, 2019, 1:01 pm

I remember watching about a guy that made all his family and friends into a sims game and lived there instead of his life :D

That is exactly what I am talking about, imagine having another life in VR with a different family and different friends.

int - March 27, 2019, 2:36 pm

this is some sword art online shit rofl

Mix - March 27, 2019, 2:44 pm

No. It. Will. Not. Have you seen ready player one? if not watch it, and see what happens.

Zeno Sama - March 27, 2019, 2:51 pm

There will be something pretty close to Reality for sure check this video out if u havnt yet:

Something funny just rang a bell when you mentioned swords, you can live in ANY era and travel the world from just the VR. That is pretty amazing.

I did check this out, it is amazing that this can be used for practice rather than going to the gun range as well.

From your comment it seemed like the ending will give a bad connotation to the future of VR, I will check it out.

Its somewhat good and somewhat bad as it shows everything that could happen

red - March 27, 2019, 3:25 pm

Yes, in the near future there will be VR technology in nearly everything allowing it to read and write from your brain to it's system for action.

You can read a full article [here](#) explaining how Facebook & Google are using new AI technology to make a "brain-computer interface". They also call this new technology they are working on a sort of "brain-mouse-pointer" that can revolutionize our communication a lot just by means of a yes-no click/interface.

"Dugan refers to the technology as a "brain mouse for AR," meaning it could be an ideal way to receive direct input from neural activity that would remove the need for augmented reality devices to track hand motions or other body movements." - All the unnecessary movement with our legs, hands, and head will soon be removed with advancements in technology using quantum mechanics/quantum theory. The D-Wave is a quantum computer that has given quantum computing power to anyone to test so a lot of new technology and AI's are soon to release.

arlington - March 27, 2019, 3:27 pm

My input is that not only will VR have a profound impact on our ability to distinguish what is real and what is not, Mixed Reality, similar more or less to Augmented Reality will not only be able to make

your surroundings interactive but with the current advances in bionic human-eye resolution displays it will be very difficult to tell what is real and what is not.

I agree with this, VR can only advance from here. At this point the images mostly do not look exactly like reality. I feel like at one point it will resemble everything perfectly.

I will check it out and let you know how it goes, I am actually interested in watching a movie regarding this idea.

I never heard about that, it was a interesting read.

What do you think about this technology?

What do you think about this technology?

I think the technology has existed for a while now and they are just now releasing droplets of information to the public so that it entices people into looking forward to the technology thus giving them more reason to jack the prices up and make everyone addicted to it before it even comes out in the stores. I also think this technology will be used as a sort of "trojan" that will in the bigger picture be used to harvest data from our brains and make a super intelligent AI that allows the most powerful groups and bloodlines in the world to become their own Gods and live forever while creating and destroying anything they want. I also think the technology will be used in military/martial

law tactics to produce algorithms upon the masses that depict whether or not you are loyal to the New World Order or not. And if you're not loyal to the NWO then you will be inflamed with psychological attacks by means of electromagnetic torture ranging anywhere from depression, suicidal thoughts, schizophrenia, Alzheimer, etc.

welldonesteak - April 3, 2019, 11:35 am

Probably in the next 100 years

Everex - April 3, 2019, 12:56 pm

Wow , I've seen this video ~2 weeks ago and i was amazed.

I think its still in early phase, but one time VR will be Reality because they improve VR day-by-day. But its only for rich people or for kids, because if normal people don't work they cant live (no food, electricity and other things). But i would like to live some days in VR.
