Thread: [Before learning web hacking, I thought I would ask](#)

QMark - March 27, 2019, 6:59 pm

If I learn web development then after that I could start learning web hacking. At what point in my web development journey will I be able to start learning web hacking?

Like what would a good rule of thumb be for it?

Smart - March 27, 2019, 10:35 pm

in my opinion there are nothing called rule here

only you who can figure out when you are ready to get into new level of work just take your time learning web development and make some simple projects first then go to new step like creating your own web script a simple one for sure and from here you can go very good with pentesting

Bacardi - March 28, 2019, 1:25 pm

If you're interested enough, you'll find a way. No need for any web development experience, although it might help.

QMark - March 28, 2019, 3:55 pm

People on Reddit are telling me to learn to make websites and then start learning it is why I asked.

Sitrep - March 28, 2019, 6:57 pm

When you know the syntax of the language you're coding a website with, and you really understand the code you will be able to exploit the code if you read about different vulnerabilities parallel to your coding course. I think that it will fall in pretty natural after a while.

I mean, if you try to code a vulnerable PHP login page, then you can practice Sqli on that page for example.

helloworld112 - March 28, 2019, 11:50 pm

It is extremely beneficial to learn web development before. After all, hacking is simply breaking existing logic; how do you expect to do that without understanding the underlying code? Trust me, learn some basics first then try to break it.

RRSS - March 29, 2019, 7:53 am

Honestly you just have to start digging in it. If you dig long enough, you will gain enough knowledge. This is all about practice.

Steven77 - May 31, 2019, 11:16 pm

I just got to know about hacking, can I be like you
