Thanks chief, Bookmarked this.

sam021 - April 12, 2019, 7:25 am

good, thanks for sharing it...

absojedi - April 15, 2019, 3:04 am

Thank for sharing this OP reaaaaly useful, especially the last one

<https://www.youtube.com/watch?v=ggtFHf26z88>

Can anyone tell me why and how is this working for PHP ..

Code curl HOST/?page=php://filter/convert.base64-encode/resource/file

I thought that you cannot see the contents of PHP file except when it is supposed to load a webpage and this guy is using this to check everything ..

Where can I see more info on what can I do with this php:// line and how it works?

Thanks!
